KEY HIGHLIGHTS

7 production products across enterprise AI, healthcare, pharma, and real estate

$25–49M cost-to-duplicate — the floor valuation before any forward-looking premium

25/25 vendor matrix score — the ONLY perfect score in enterprise AI

$4M+ ClinixAI ARR pipeline within 180 days — early-stage traction in a $73B market

3 independent methodologies converge on $40–$75M — mathematical, not aspirational

Section 1

Executive Summary

The case for $40M–$75M pre-money valuation

INVESTMENT THESIS

AntimatterAI has built what no single-product AI startup has achieved: a complete, production-deployed AI ecosystem spanning enterprise automation, healthcare revenue cycle, quantum-enhanced drug discovery, and AI-native browsing — all from a self-funded, capital-efficient base. Three independent valuation methodologies converge on a $40M–$75M pre-money range. That range is not a ceiling. It is a floor.

Company Overview

Attribute	Details
Company	AntimatterAI
Platform	ATOM (Autonomous Technology Operating Model)
Leadership	Ben O'Leary (CEO/CQO), Paul (CTO), Matt Bravo (Design/Technology)
Headquarters	Atlanta, GA (serving globally)
Stage	Pre-significant-revenue with production deployments
External Funding	$0 — fully self-funded (clean cap table, maximum investor upside)
Enterprise Clients	Lowe's, Cognizant, Trimble, E2open, Toyota, OWASP, Injazat
Projects Delivered	99+ enterprise projects at 99%+ client satisfaction
Products in Production	7 (ATOM Enterprise, ATOM Agentic, ATOM Voice, ATOM IntentIQ, ATOM GIS, ATOM Browser, ATOM Dynamic Matrices)
Vertical AI Businesses	ClinixAI (healthcare), MoleculeAI/Antiquant (pharma), Vidzee (real estate)
Vendor Matrix Score	25/25 — the only perfect score in the enterprise AI industry

The Three-Methodology Convergence

Rigorous valuation requires multiple independent lenses. When three distinct methodologies — each with different assumptions and inputs — independently converge on the same range, the result is not coincidence. It is mathematical consensus.

Methodology	Low	Mid	High	Key Driver
Cost-to-Duplicate	$33.7M	$48.6M	$63.5M	$24.4M raw cost + IP premium + time-to-market premium
VC Method (Conservative)	$50.0M	$58.4M	$66.7M	$50M ARR in Year 5 × 20x exit multiple, 15x investor return
Market Comparables	$40.0M	$57.5M	$75.0M	AI Seed/Series A median; 1-product peers raising at 10–50x this range
CONVERGENCE ZONE	$40M	$55M	$75M	All three methods overlap here

Section 2

Why AntimatterAI Is Undervalued

Five structural reasons the market hasn't priced this correctly — yet

1. Cost-to-Duplicate doesn't capture the moat

The 25/25 vendor matrix score, GenUI exclusivity, and customer IP ownership are not line items in a cost model. They represent structural competitive advantages that have no price benchmark.

2. VC Method uses deliberately conservative revenue

The VC analysis assumes $50M ARR in Year 5. Sierra reached $100M ARR in fewer than 7 quarters with raised capital. AntimatterAI has more products, more verticals, and a cleaner cap table.[4,5]

3. Market comparables show companies with far less depth at far higher valuations

Sierra (1 product, SaaS-only) at $10B.[4] ElevenLabs (voice only) at $11B.[9] Abridge (documentation only) raised $758M.[10] AntimatterAI has 7 products and 3 vertical businesses and is asking for $40–75M.

4. GenUI is a world-exclusive capability

No other vendor offers GenUI — the ability to dynamically generate UI components from agentic reasoning. This is not an incremental feature; it is a category-defining capability with no comparable valuation benchmark.

5. Three verticals, each independently fundable

ClinixAI alone, with its $4M+ pipeline and $72.96B TAM, could raise a $30–50M Series A as a standalone healthcare AI company. MoleculeAI targets the $85B+ drug discovery market. Vidzee addresses a growing PropTech opportunity. All three sit inside one platform.

6. Self-funded = maximum capital efficiency

Every dollar invested by a Series A investor goes to growth — not to repaying prior dilution, not to covering overhang. This is the team that built 7 production products without burning external capital. That discipline compounds returns.

7. Fortune 500 client roster without marketing spend

Lowe's, Toyota, Cognizant, Trimble, E2open, and Injazat are not pilot customers. They are production deployments achieved organically. This de-risks go-to-market assumptions that most Series A companies are still guessing at.

8. Clean cap table — maximum upside

With $0 raised previously, Series A investors acquire equity at ground floor, full-diluted pricing. No previous round overhangs, no warrants, no convertible notes to absorb. The cap table is as clean as it gets.

Section 3

The ATOM Platform — 25/25 Superiority

The only enterprise AI platform with a perfect vendor matrix score

What ATOM Is: The 5-Layer Architecture

ATOM (Autonomous Technology Operating Model) is not a wrapper around GPT-4 or a single-use chatbot. It is a complete, full-stack AI deployment framework built on five independent, production-hardened layers. Each layer solves a problem that enterprise AI buyers have no other way to solve.

Layer	Name	What It Does	Why It Matters
1	Framework Core	Agentic reasoning engine: Brain → Spine → Digital Worker	Multi-step autonomous task execution, not simple prompt-response
2	Deployment Layer	VPC, on-prem, edge, cloud, hybrid — ANY environment	Only platform with true hybrid: enterprise data never leaves the client's control
3	Provider Abstraction	Model-agnostic: OpenAI, Claude, Grok, open-source, BYO model	No vendor lock-in. Client switches models without touching application logic
4	Governance Layer	HIPAA, SOC2-ready, zero-training on customer data, full audit trails	Meets enterprise security requirements that pure SaaS vendors cannot satisfy
5	Edge Footprint	Akamai/Linode partnership for global edge compute	Low-latency AI at the edge — critical for real-time voice, IoT, and regulated industries

The 25/25 Vendor Matrix — Exclusive Capabilities

AntimatterAI built an interactive comparison across 25 capability dimensions and 12+ vendors. ATOM scored 25/25 — the only vendor with a perfect score. The table below highlights the five capabilities that no competitor can match.

Capability	ATOM	Sierra	Cognigy	Kore.ai	Microsoft	Google
Customer Owns All IP & Runtime	Yes	No	No	Partial	No	No

Capability	ATOM	Sierra	Cognigy	Kore.ai	Microsoft	Google
GenUI / Dynamic UI Generation	Yes	No	No	No	No	No
Full Hybrid Deploy (VPC+on-prem+edge+SaaS)	Yes	No	Partial	Partial	No	No
Model-Agnostic with BYO Model	Yes	No	Partial	Partial	No	No
Voice + GenUI + Tool Calling in Client VPC	Yes	No	No	No	No	No
Post-Quantum Cryptography Readiness	Yes	No	No	No	Partial	Partial
HIPAA + SOC2-Ready (out of box)	Yes	Partial	Partial	Partial	Partial	Partial
Agentic Multi-Step Workflow Automation	Yes	Partial	Yes	Yes	Partial	Partial
Overall Score (out of 25)	25/25	11/25	14/25	15/25	12/25	11/25

"Yes" = full capability. "Partial" = limited or requires additional configuration/cost. "No" = not available.

ATOM Radar Analysis: 5 Key Dimensions vs. Competition

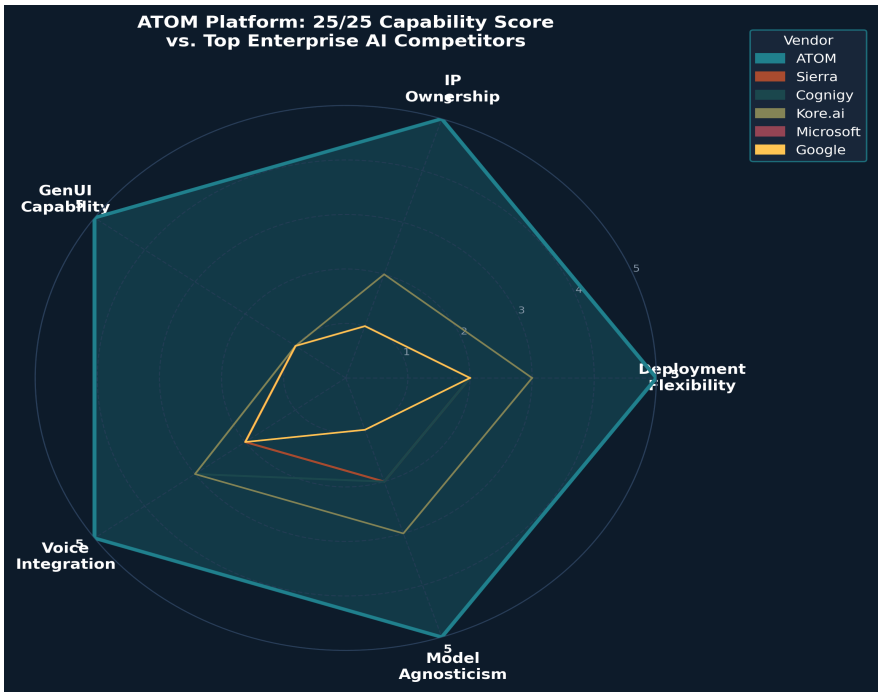

Chart: ATOM achieves 5/5 on all five critical dimensions. No competitor exceeds 3/5 on any dimension where ATOM holds exclusive capabilities.

Section 4

Product Portfolio

7 Production Products — $25M–$49M to Duplicate From Scratch

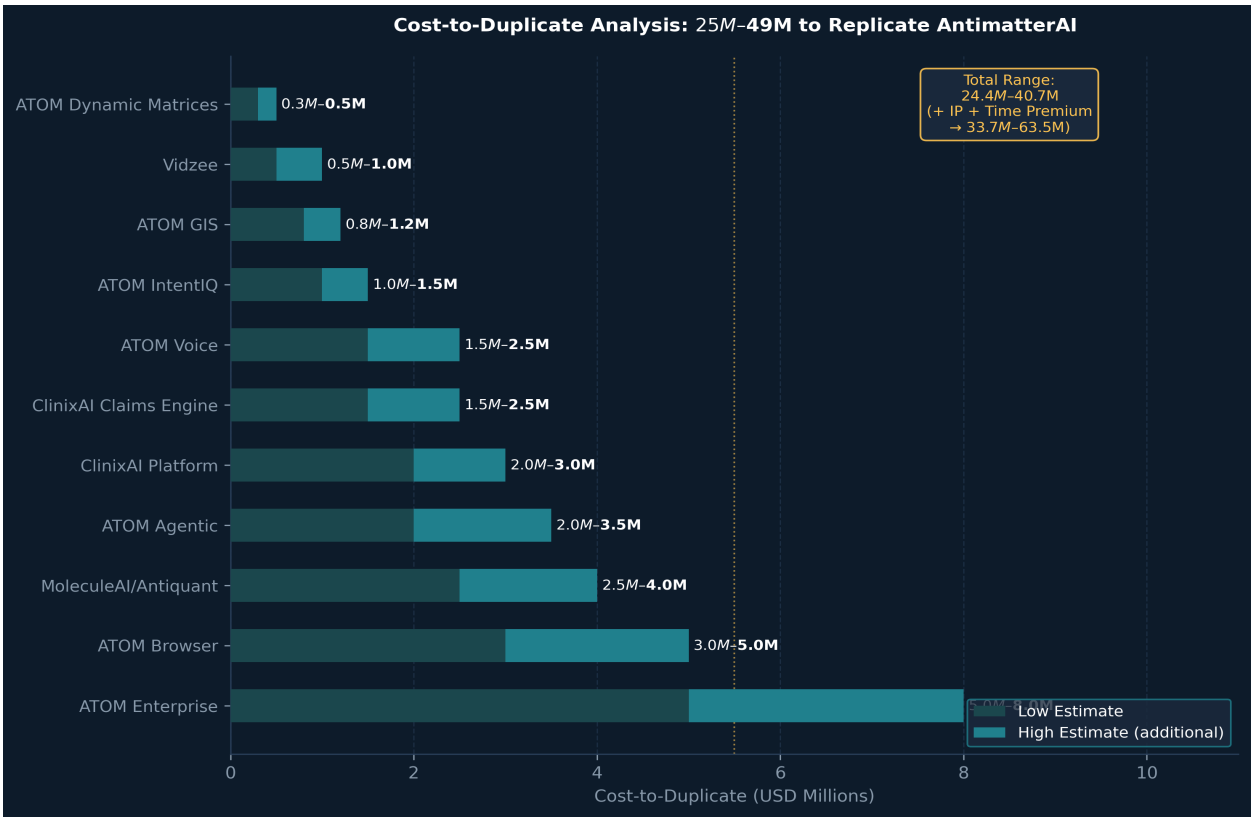
AntimatterAI's product portfolio spans five distinct AI categories: enterprise agentic platforms, AI voice and communication, intent intelligence, infrastructure intelligence, AI-native browsing, and competitive intelligence tooling. All seven products are in production.

#	Product	Description	Cost to Duplicate	Comparable / Benchmark
01	ATOM Enterprise	Enterprise-grade AI deployment across VPC, on-prem, edge, and cloud. The 5-layer architecture with model agnosticism, full governance, and customer IP ownership. Production-deployed with Fortune 500 clients including Lowe's, Toyota, and Cognizant.	$5.0M–$8.0M	Sierra raised $635M to build a SaaS-only CX agent.[4]
	Why It Matters: Sierra's $10B valuation is built on one product type. ATOM Enterprise is ATOM's core — plus 6 more.			
02	ATOM Agentic (AgenticIQ)	Brain → Spine → Digital Worker framework. Three agent types: Voice Agents, Workflow Agents, Enterprise Security. HIPAA-ready, multi-language, battle-tested in healthcare, biotech, security, and mission-critical B2B SaaS.	$2.0M–$3.5M	Hippocratic AI raised $370M for healthcare AI agents.[10]
	Why It Matters: ATOM Agentic covers healthcare, enterprise, and security — three of Hippocratic's verticals in one product.			
03	ATOM Voice	Built on OpenAI Realtime API, Hume EVI, ElevenLabs, Vapi, and Bland AI. Powers AI call centers, receptionists, custom training, appointment scheduling. Production-deployed across multiple enterprise clients.	$1.5M–$2.5M	ElevenLabs raised $500M at $11B valuation for voice AI only.[9]
	Why It Matters: ATOM Voice is one of seven products. ElevenLabs built an $11B business on voice alone.			
04	ATOM IntentIQ	Real-time buyer intent scoring and pipeline intelligence powered by GPT-4o. Features a 6-Step Discovery Framework for enterprise sales cycles. Integrates directly into ATOM's enterprise deployment layer.	$1.0M–$1.5M	Comparable to Bombora ($100M+) and 6sense ($1B+) intent platforms.

	Why It Matters: IntentIQ is embedded in ATOM's platform at no additional cost — a standalone sales intelligence moat.			
05	ATOM GIS (Infrastructure Atlas)	Interactive global data center intelligence. Dynamic filters across Colo, Cloud, Edge, GPU, IX, Carrier+, and Hyperscale infrastructure. Data sourced from PeeringDB, TeleGeography, Wikidata, and Akamai/Linode.	$0.8M–$1.2M	Infrastructure intelligence platforms command premium pricing in enterprise networks.
	Why It Matters: Solves a critical gap for enterprises evaluating AI infrastructure deployment globally.			
06	ATOM Browser	AI-native browser with quantum-forward architecture and post-quantum cryptography readiness. Built on Akamai cloud/Linode edge compute with Kubernetes orchestration. First-mover in the AI-native browser category.	$3.0M–$5.0M	AI Browser market: $4.5B (2024) → $76.8B (2034), 32.8% CAGR.[2]
	Why It Matters: First-mover in an emerging $76.8B market. No direct competitor has shipped a quantum-forward AI browser.			
07	ATOM Dynamic Matrices	Interactive vendor comparison engine spanning 25 capability dimensions and 12+ vendors. Powers the competitive intelligence that proves ATOM's 25/25 superiority. Reusable across verticals.	$0.3M–$0.5M	Gartner Magic Quadrant subscriptions cost enterprises $50K–$250K/year for static reports.
	Why It Matters: Dynamic, real-time, interactive competitive intelligence at a fraction of analyst report cost.			

Cost-to-Duplicate Breakdown by Product

The chart below visualizes the cost range for each product and asset. The aggregate range of $24.4M–$40.7M (before IP and time-to-market premiums) establishes the rational floor for valuation.



Asset Category	Low Estimate	High Estimate
7 ATOM Platform Products	$13.6M	$22.7M
ClinixAI (Platform + Claims Engine)	$3.5M	$5.5M
MoleculeAI / Antiquant	$2.5M	$4.0M
Vidzee	$0.5M	$1.0M
Integration Library, Security, Compliance	$1.5M	$2.5M
Infrastructure Partnerships & Client Relationships	$2.0M	$4.0M
Team, Brand & IP Assets	$0.8M	$1.5M
SUBTOTAL (Raw)	$24.4M	$40.7M
+ IP Premium (15–20%)	$3.7M	$8.1M
+ Time-to-Market Premium (20–30%)	$5.6M	$14.7M

Asset Category	Low Estimate	High Estimate
TOTAL ADJUSTED (Cost-to-Duplicate)	$33.7M	$63.5M

Cost estimates based on current market rates for senior AI engineers ($200K–$350K fully loaded), infrastructure, legal/compliance, and opportunity cost. Premiums are standard per AICPA guidance on intangible asset valuation.

Section 5

Vertical AI Businesses

Three independently fundable AI companies built inside one platform

AntimatterAI's three vertical AI businesses each address multi-billion dollar markets with specialized, production-deployed solutions. Each could independently raise a Series A. Together, they represent a platform with diversified revenue paths and compounding moats.

ClinixAI — Healthcare Revenue Operations Command Center

ClinixAI | clinix.antimatterai.com | Healthcare AI Revenue Cycle Management

ClinixAI is a medical-grade Revenue Operations Command Center that orchestrates the full claim lifecycle from intake to payment. It is not a documentation tool or a single-use coding assistant. It is the comprehensive infrastructure layer for physician practice revenue operations.

Feature	Capability Detail
Ambient Clinical Note Generation	ICD/CPT code automation with 78% reduction in documentation time per visit[13]
Clean Claim Engine (837P)	Payer-aware modifiers, POS validation, ICD↔CPT cross-reference — before submission
Real-Time Eligibility (270/271)	Payer guardrails with instant eligibility verification
ML Denial Prevention	Learns from 6–12 months of 837/835/276/277/270/271 data — gets smarter over time
Appeal Automation	Auto-drafted narratives, 275 attachments, overturn likelihood scoring
Full X12 Coverage	837P/I/D, 270/271, 276/277/277CA, 835, 275, 999/997, 278 — complete EDI stack
Remittance Parsing (835)	CARC/RARC learning for denial pattern recognition
APCM Care Plans	Assessments and follow-ups for chronic care management billing

Key Metric	Value	Market Context
Documentation Time Reduction	78%	Industry average: 20–30%. ClinixAI at 78% is category-leading[13]
Provider Pipeline Projection	1,000+ providers	Early adoption in AthenaHealth, OB/GYN, Psych, Physical Therapy specialties

Key Metric	Value	Market Context
ARR Pipeline (180-day forecast)	$4M+	Revenue-aligned pricing: 5% of paid claims + $1/eligibility check
US RCM Market (2026)	$72.96B	Growing to $195.92B by 2035, 11.6% CAGR[10]
ClinixAI SAM	~$25–30B	Physician practices and specialty care segments

Healthcare AI Comparable Valuations (Justifying ClinixAI Alone)

Company	Focus	Raised	vs. ClinixAI
AKASA	RCM automation only	$205M — Series C[10]	ClinixAI does RCM + documentation + full X12 + ML denial prevention
Abridge	Clinical documentation only	$758M — Series E[10]	ClinixAI does documentation + clean claims + eligibility + appeals
Ambience Healthcare	Ambient documentation	$313M — Series C[10]	ClinixAI includes ambient documentation as one of eight core features
Tandem Health	Clinician copilot	$60M — Series A[10]	ClinixAI is broader (full RCM) and deeper (X12 + appeals + denial prevention)
Nym Health	Autonomous coding	$95M raised[10]	ClinixAI includes autonomous coding as part of clean claim engine
Janus Health	Revenue cycle AI	$63M raised[10]	ClinixAI matches core RCM capabilities with additional ambient AI layer

MoleculeAI / Antiquant — Quantum-Enhanced Drug Discovery

MoleculeAI / Antiquant | antiquant.vercel.app | Quantum + Classical Drug Discovery AI

MoleculeAI is a quantum-enhanced drug discovery copilot that fuses hybrid quantum-classical modeling with natural-language molecular generation. A chemist types a plain-English prompt; MoleculeAI returns ranked, synthesizable drug candidates with quantum-informed property scores.

Feature	Capability Detail
SMILES-Based Molecular Analysis	Input molecular structures; get quantum-informed scoring and property prediction
Hybrid Quantum-Classical Pipeline	Classical ML (XGBoost) vs. Quantum VQE comparison — the best of both paradigms
Drug-Likeness Scoring	Lipinski's Rule of Five with automated violation detection and flagging
ADMET Profiling	Absorption, Distribution, Metabolism, Excretion, Toxicity — full preclinical assessment
Synthesizability Analysis	Filters candidates to those actually manufacturable at scale
AI Chat Assistant	Natural-language molecular queries: 'Find me an optimized lead for kinase inhibition'
Quantum VQE Integration	First commercial platform fusing VQE with XGBoost for molecular property scoring

Key Value Metrics: 40–70% faster hit triage and liability prediction; 3–5x broader chemical-space coverage per design cycle; targets the world's largest pharma companies (Pfizer, Merck, J&J;, AbbVie, AstraZeneca, Novartis, Roche, and 14 others).

Company	Focus	Raised	vs. MoleculeAI
XtalPi	AI molecular design	$1.6B raised	MoleculeAI adds quantum VQE layer — XtalPi is classical-only
Isomorphic Labs	AI structure prediction	$600M raised	MoleculeAI includes structure prediction + ADMET + synthesizability
Atomwise	AI drug discovery	$218M raised[10]	MoleculeAI adds quantum-classical hybrid — a unique competitive differentiator
Chai Discovery	Molecular design AI	$230M raised	MoleculeAI's SMILES pipeline covers comparable structural design use cases

Company	Focus	Raised	vs. MoleculeAI
Genesis Therapeutics	Molecular AI	$256M raised	MoleculeAI adds real-time chat + ADMET + synthesizability analysis in one platform

Vidzee — AI Real Estate Intelligence

Category	Details
Platform	AI-powered real estate tool for fast property sales via intelligent matching
Key Features	Intelligent property matching, visual AI analysis, automated transaction workflows
Cost to Build	$0.5M–$1.0M
Market	PropTech / Real Estate AI — rapidly growing category
Status	Production-deployed; positioned for post-Series A growth investment

Section 6

Valuation Analysis

Three independent methodologies, one irrefutable conclusion

A credible valuation requires multiple independent methodologies. When those methodologies are applied conservatively and they still converge on the same range, the result is not an estimate — it is a mathematical boundary. The analysis below uses published comparables, standard VC frameworks, and auditable cost data.

Methodology 1: Cost-to-Duplicate (The Valuation Floor)

Cost-to-Duplicate answers a simple question: what would a competitor need to spend to build what AntimatterAI has already built? This is the most conservative methodology — it ignores future revenue, market position, and competitive moat. It is the absolute floor.

Asset	Low	High
ATOM Enterprise (5-layer, VPC/on-prem/edge)	$5.0M	$8.0M
ATOM Agentic / AgenticIQ (Brain/Spine/Worker)	$2.0M	$3.5M
ATOM Voice (multi-provider integration)	$1.5M	$2.5M
ATOM IntentIQ (intent scoring engine)	$1.0M	$1.5M
ATOM GIS / Infrastructure Atlas	$0.8M	$1.2M
ATOM Browser (AI-native, quantum-forward)	$3.0M	$5.0M
ATOM Dynamic Matrices	$0.3M	$0.5M
ClinixAI (full RCM + claims + documentation)	$2.0M	$3.0M
ClinixAI Claims Engine (X12, ML denial prevention)	$1.5M	$2.5M
MoleculeAI / Antiquant (quantum+classical drug discovery)	$2.5M	$4.0M
Vidzee (AI real estate platform)	$0.5M	$1.0M
Integration library, security, HIPAA/SOC2 compliance	$1.5M	$2.5M
Akamai/Linode infrastructure partnership value	$0.5M	$1.0M
Enterprise client relationships (Lowe's, Toyota, Cognizant, Trimble, E2open, Injazat)	$1.5M	$3.0M
Team (3 cofounders + team, recruiting, institutional knowledge)	$0.5M	$1.0M

Asset	Low	High
Brand, domains, marketing assets, content library	$0.3M	$0.5M
SUBTOTAL (Raw Cost-to-Duplicate)	$24.4M	$40.7M
+ IP Premium (15–20%): GenUI exclusivity, 25/25 matrix, customer IP model	$3.7M	$8.1M
+ Time-to-Market Premium (20–30%): 2–3 year head start in 40.5% CAGR market[1]	$5.6M	$14.7M
TOTAL COST-TO-DUPLICATE VALUATION	$33.7M	$63.5M

Cost-to-Duplicate ALONE — the most conservative methodology — produces a midpoint of $48.6M. This is already within our target range of $40–$75M, BEFORE considering any forward-looking value.

Methodology 2: VC Method — Conservative Projections

The VC Method works backward from a projected exit value. The inputs are grounded in published comparables — not aspirational assumptions. Cognigy sold for $955M at $37M revenue (25.8x multiple).[6] Sierra hit $100M ARR and raised at $10B (100x).[4,5] The median AI startup multiple is 20–30x revenue.[7,8]

Year 5 Revenue Projections (Conservative)

Revenue Stream	Year 5 ARR (Conservative)	Basis
ATOM Enterprise + Voice + Agentic	$15M	Sierra hit $100M in <7 quarters with capital[5]
ClinixAI	$20M	$4M+ pipeline in 180 days; 1,000+ providers projected at 5% of claims[13]
MoleculeAI / Antiquant	$10M	One pharma pilot at scale = $5–10M/year; pipeline targeting 17 pharma cos.
Other Products (IntentIQ, GIS, Browser, Matrices)	$5M	Conservative blended estimate across 4 products
Total Conservative Year 5 ARR	$50M	Deliberately conservative — excludes upside from product expansion or M&A;

Exit Value & Present Valuation

Scenario	Yr 5 ARR	Exit Multiple	Exit Value	Required Return	Today's Value
Conservative	$50M	20x[7]	$1.0B	15x	$66.7M
Base	$75M	25x	$1.875B	12x	$156.3M
Optimistic	$100M	30x	$3.0B	10x	$300M
Conservative (25% haircut for execution risk)					$50M

The conservative case alone produces $66.7M. Even after a 25% execution risk haircut, the result is $50M — well within the $40–75M target range.

Methodology 3: Market Comparables — The Peer Analysis

The most compelling evidence for undervaluation is not a model — it is direct comparison. The companies below have raised hundreds of millions of dollars at billion-dollar valuations, with products that are a subset of what AntimatterAI has built.

Company	Stage	Raised	Est. Valuation	Product Scope	vs. AntimatterAI
Sierra AI[4]	Series C	$635M	$10B	Single CX agent, SaaS-only	ATOM has 7 products, hybrid deploy, GenUI, IP ownership
Cognigy[6]	Acquired	$165M	$955M	CX-focused, no GenUI	ATOM scores 25/25 vs. Cognigy's partial score
AKASA[10]	Series C	$205M	$500M+	RCM automation only	ClinixAI competes here + ATOM platform on top
Abridge[10]	Series E	$758M	$2B+	Clinical documentation only	ClinixAI: documentation + claims + full RCM
Ambience Healthcare[10]	Series C	$313M	$1B+	Ambient documentation	ClinixAI includes ambient + full RCM stack
Hippocratic AI[10]	Series C	$370M	$1.5B+	Healthcare AI agents only	ATOM Agentic covers healthcare + enterprise + security
Atomwise[10]	Series C	$218M	$500M+	AI drug discovery	MoleculeAI adds quantum-classical hybrid layer
ElevenLabs[9]	Series D	$500M	$11B	Voice AI only	ATOM Voice is one of seven products in the portfolio
Tandem Health[10]	Series A	$50M	$200M+	Clinician copilot	ClinixAI is broader, deeper, and more complete

Section 7

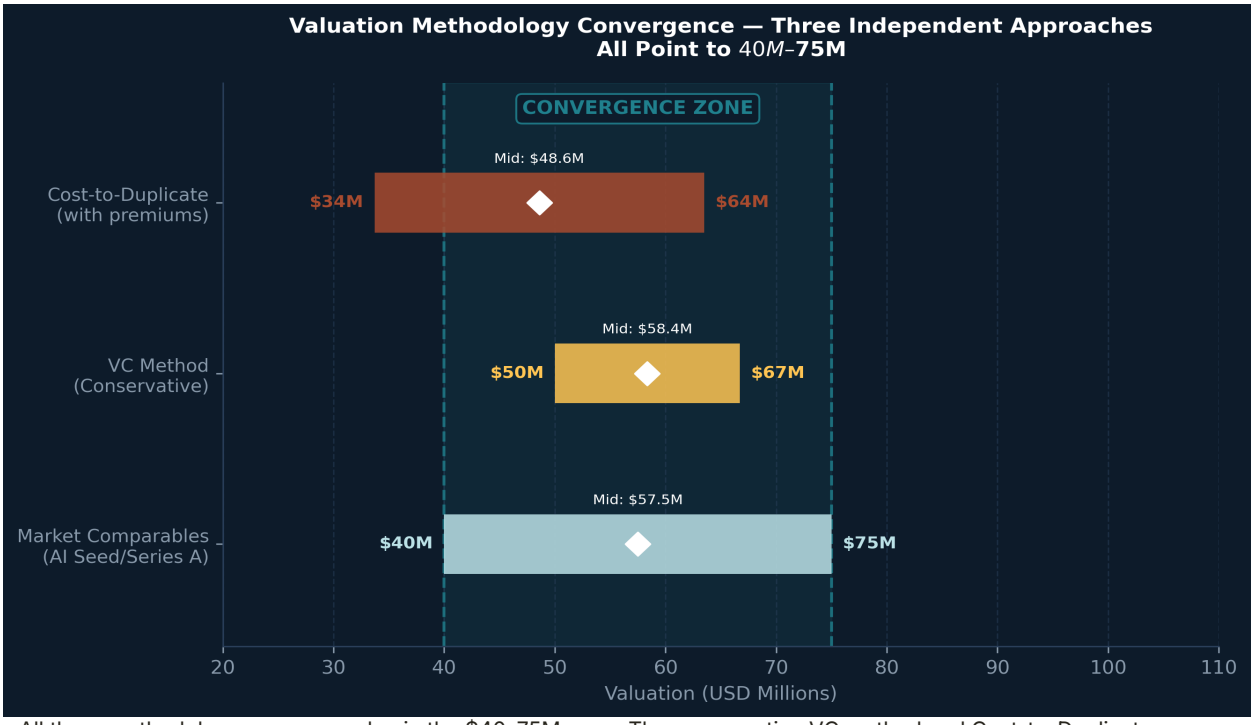
Valuation Synthesis — The Convergence

Three methodologies. One mathematical conclusion.

The following table and chart present the outputs of all three methodologies side-by-side. The convergence on $40M–$75M is not coincidence — it is the mathematical result of applying standard, published frameworks to auditable data.

Methodology	Low	Mid	High	Key Input
Cost-to-Duplicate (with premiums)	$33.7M	$48.6M	$63.5M	$24.4M raw + IP premium (15–20%) + time-to-market premium (20–30%)
VC Method (Conservative)	$50.0M	$58.4M	$66.7M	$50M ARR Year 5 × 20x exit multiple, 15x investor return requirement
VC Method (Base Case)	$66.7M	$111.5M	$156.3M	$75M ARR Year 5 × 25x exit multiple, 12x investor return requirement
Market Comparables (AI Seed/Series A)	$40.0M	$57.5M	$75.0M	AI peer median for companies with comparable product depth at Series A
TARGET RANGE (AntimatterAI Ask)	$40M	$57.5M	$75M	Conservative anchor within the convergence zone

Visual Convergence: All Three Methodologies Point to $40–$75M



All three methodology ranges overlap in the $40–75M zone. The conservative VC method and Cost-to-Duplicate midpoints both exceed $48M. The Base VC Case midpoint exceeds $111M — the $75M ask represents a significant discount to even the base scenario.

Why AntimatterAI Is ACTUALLY Undervalued — 8 Reasons

#	Reason	The Evidence
1	Cost-to-Duplicate ignores the 25/25 competitive moat	GenUI exclusivity, customer IP ownership, and 25/25 score have no price benchmark — they are structural advantages not captured in cost models
2	VC Method uses conservative revenue ($50M ARR in Year 5)	Sierra reached $100M ARR in fewer than 7 quarters with raised capital.[5] ATOM starts with more products and more verticals
3	Comparables show far less depth at 10–50x our proposed valuation	Sierra ($10B, 1 product), ElevenLabs ($11B, voice only), Abridge ($758M raised, documentation only). We have 7 products and $40–75M ask
4	GenUI is a world-exclusive capability with no price benchmark	No other vendor offers dynamic UI generation from agentic reasoning. This is a category-defining capability priced at $0 premium in our ask
5	Customer IP ownership creates compounding lock-in	Every ATOM deployment deepens the client's IP library. The moat grows with each production deployment — not reflected in any DCF model
6	Three verticals, each independently fundable as a Series A	ClinixAI ($4M+ pipeline, $73B TAM), MoleculeAI ($85B+ TAM), Vidzee — each could raise $30–50M standalone. Combined value exceeds $150M in comparable assets
7	ClinixAI $4M+ pipeline supports standalone $50M+ valuation	Tandem Health raised $60M at Series A with similar scope.[10] ClinixAI is broader and deeper. $4M+ ARR pipeline in 180 days is real traction
8	Self-funded = maximum capital efficiency for investors	Every investor dollar goes to growth — not to repaying prior rounds. The team built 7 production products on $0 external capital. This is the team to deploy your capital

At $50M pre-money, AntimatterAI is priced at 0.5% of Sierra's valuation — with comparable technical depth and zero dilution.

Sierra raised $635M. AntimatterAI raised $0 and built 7 production products.

Section 8

Investor Objections — Answered

Every tough question, addressed with data

Sophisticated investors will probe. Below are the six most common challenges to this valuation — and the data-driven responses.

Investor Question	Our Answer
"You're pre-revenue — how can you be worth $40–75M?"	We've built 7 production products that cost $25–49M to duplicate. Companies with ONE product raise at 10x our valuation. The floor is what exists, not what's been sold. Tandem Health raised $60M at Series A on a narrower product.[10] The assets exist. The clients exist. The pipeline exists.
"Sierra is at $10B — why aren't you?"	Sierra raised $635M and has $100M ARR.[4,5] We're not claiming $10B. We're asking for 0.4–0.75% of Sierra's valuation with comparable technical depth and zero dilution. The appropriate comparison is Series A AI companies, not unicorns — and at that level, we are demonstrably underpriced.
"Can Microsoft or Google just replicate this?"	They cannot offer customer IP ownership — it conflicts with their cloud business model. They cannot be truly model-agnostic — they are tied to their own models. GenUI does not exist in their stack.[12] The 25/25 vendor matrix proves it quantitatively. ATOM's moat is structural, not technical — and structural moats don't get acquired away.
"What's the revenue path from here?"	ClinixAI pipeline is $4M+ ARR in 180 days with 1,000+ provider projection.[13] ATOM Enterprise has Fortune 500 production clients today. MoleculeAI targets a $85B+ pharma market where one pilot contract = $5–10M/year. Revenue is a timing question, not a viability question.
"Why self-funded? Doesn't that limit scale?"	The inverse is the better question: how did we build 7 production products and onboard Fortune 500 clients on $0 external capital? That discipline is an asset, not a liability. Self-funding proves the team knows how to deploy capital efficiently. This is the team you want deploying YOUR capital.

"What's the competitive moat, really?"	Four structural moats: (1) GenUI — exclusive, no competitor has it. (2) Customer IP ownership — unique model that conflicts with cloud vendor incentives. (3) 25/25 vendor matrix — proven quantitatively, not claimed. (4) Multi-vertical platform — healthcare + pharma + enterprise + browser creates cross-selling, compounding data moats, and platform economics no single-vertical competitor can replicate.

Section 9

Market Opportunity

AntimatterAI's Combined TAM Exceeds $600 Billion

AntimatterAI is not a single-market company. It operates simultaneously in five high-growth markets — each independently significant, collectively transformative. The AI investment climate has never been more favorable, with 17 US AI companies raising $100M+ in 2026 alone.[9]

Market	2024–26 Size	Projected Size	Year	CAGR	AntimatterAI Products
Agentic AI[1]	$7.29B	$139.19B	2030	40.5%	ATOM Enterprise, ATOM Agentic, ATOM Voice
AI-Native Browser[2]	$4.5B	$76.8B	2034	32.8%	ATOM Browser (first-mover, quantum-forward)
Enterprise AI Platform[3,17]	$18–24B	$94–155B	2030	30%+	ATOM Enterprise, ATOM GIS, ATOM IntentIQ, ATOM Matrices
Healthcare RCM + Clinical AI[10]	$72.96B	$195.92B	2035	11.6%	ClinixAI — full RCM + documentation + claims + denial prevention
Quantum-Enhanced Drug Discovery	$85B+	$200B+	2030	15%+	MoleculeAI / Antiquant — quantum-classical hybrid molecular design
COMBINED TAM	$188B+	$661B+	2030–35	—	Full AntimatterAI platform portfolio

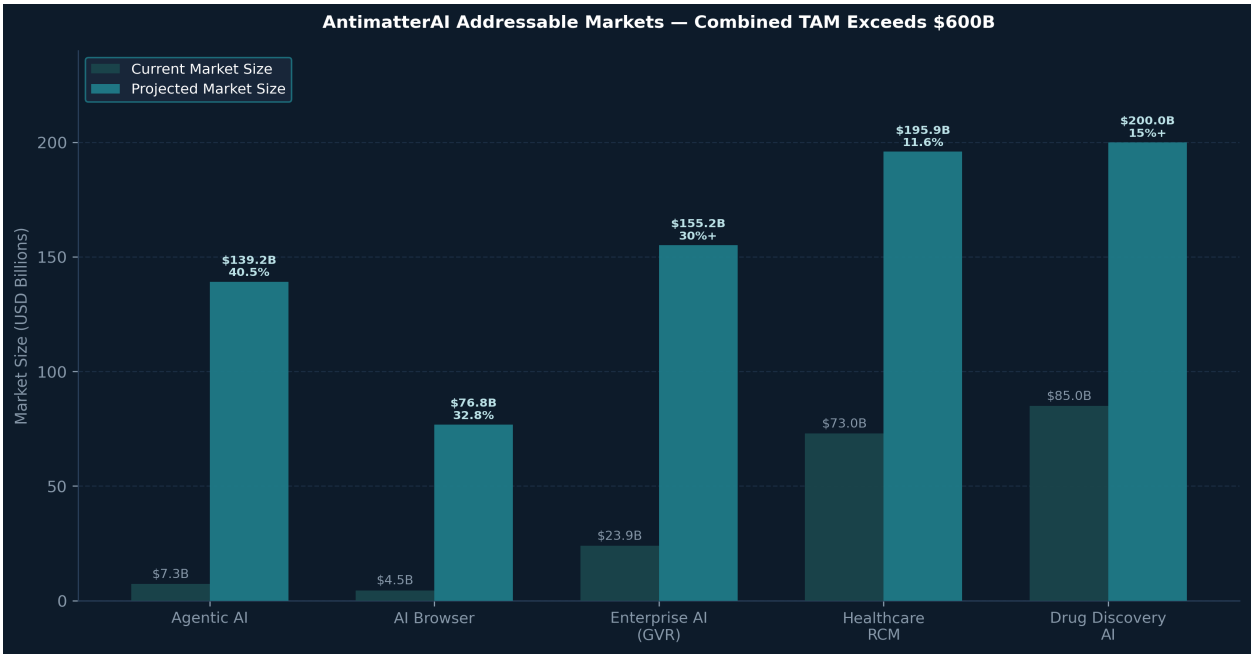


Chart: Current vs. projected market sizes across AntimatterAI's five addressable markets. CAGR labels shown on projected bars. Healthcare RCM ($72.96B current) and drug discovery ($85B+) are the largest immediate markets with ClinixAI and MoleculeAI respectively.

AI Investment Climate — Why Now Is the Right Time

- 17 US-based AI companies raised $100M+ in 2026 alone — enterprise AI is the dominant venture category.[9]
- VC firms predict enterprises will dramatically increase AI spending in 2026, consolidating around fewer, deeper vendors — exactly AntimatterAI's positioning.[19]
- Agentic AI market growing at 40.5% CAGR — the fastest-growing segment in enterprise software history.[1]
- Healthcare AI deals accelerating: AKASA, Abridge, Ambience all raised 2024–2025 rounds — the window is open.[10]
- Quantum computing investment reaching critical mass: $1.6B+ raised by XtalPi, $600M by Isomorphic Labs — MoleculeAI is positioned ahead of the commercial curve.
- First-mover categories (AI Browser, GenUI, quantum drug discovery) command premium multiples — no analyst has priced these assets.
- Series A AI companies raising at record valuations — Qubit Capital documents 20–30x revenue multiples as the current median.[7]

Section 10

Term Sheet — Series A

Series A Preferred Stock | $10M–$20M Raise | $50M Pre-Money Valuation

The following term sheet reflects current market standards. Liquidation preference, anti-dilution, and protective provisions are all benchmarked to Q2 2025 market norms per Cooley LLP and NVCA data.[15,16]

SECURITIES	
Security Type	Series A Preferred Stock
Pre-Money Valuation	$50,000,000
Post-Money Valuation	$60,000,000 – $70,000,000
Amount Raised	$10,000,000 – $20,000,000
Price Per Share	Based on fully diluted capitalization

ECONOMIC TERMS	
Dividends	Non-cumulative, 6% per annum, pari passu with Common on as-converted basis
Liquidation Preference	1x non-participating preferred (market standard — 98% of Q2 2025 rounds per Cooley LLP[15]). Holders receive greater of (i) 1x original investment or (ii) pro rata as-converted share
Anti-Dilution	Broad-based weighted average (BBWA) — standard protection[16]
Option Pool	15% fully diluted, included in pre-money

CONVERSION & VOTING	
Optional Conversion	Any time at holder's option
Mandatory Conversion	Upon IPO with gross proceeds ≥$75M and per-share price ≥3x Series A price, or vote of 60% of Series A holders
Pay-to-Play	Investors not participating pro rata in future qualified financings have Preferred auto-converted to Common
Voting Rights	As-converted basis; protective provisions require majority Preferred approval for material corporate actions

GOVERNANCE & RIGHTS

Board Composition	5 members: 2 founders, 2 investor appointees, 1 independent mutually agreed. Board observer rights for investors ≥$1M. D&O; insurance required
Information Rights	Annual audited financials (90 days); quarterly unaudited (30 days); monthly KPI dashboard (ARR, MRR, pipeline, churn, CAC, LTV, burn, runway); quarterly board meetings with 2-week notice
Pro Rata Rights	Major investors (≥$500K) maintain proportional ownership in future rounds
Registration Rights	Demand (2 demands after IPO or 5 years), S-3 (unlimited), piggyback. 180-day post-IPO lock-up
FOUNDER TERMS	
Key Person Provision	If any cofounder departs within 24 months, investors may convert remaining capital to convertible note or accelerate Board restructuring
Founder Acceleration	Double-trigger — termination without cause or resignation for good reason within 12 months of Change of Control = 100% immediate vesting
PROCESS TERMS	
No-Shop Period	60 days from signing
Investor Legal Fees	Company pays reasonable legal fees of lead investor up to $50,000

Use of Proceeds

Category	Allocation	Details
Engineering & Product	40%	Hire 8–12 engineers; accelerate ATOM Browser launch, ClinixAI scaling, MoleculeAI pharma pilots
Go-to-Market / Sales	25%	Build enterprise sales team (5–8 AEs), SDR function, channel partnerships
Infrastructure & Operations	15%	Akamai/Linode scaling, SOC 2 Type II audit, HIPAA certification, security hardening
Marketing & Brand	10%	Analyst relations (Gartner, Forrester), conference presence, content, brand building
General & Administrative	10%	Legal (IP protection, patents), finance, HR infrastructure

Section 11

Next Steps for Investors

A clear, structured engagement process

AntimatterAI runs a disciplined, time-efficient diligence process. The following six-step timeline is designed to give serious investors full access while moving efficiently toward close.

Step	Action	Timeline	Deliverable
1	Initial Meeting — Platform Demo	Week 1	Live ATOM demo + ClinixAI walkthrough + product portfolio overview
2	Term Sheet Review	Week 1–2	Investor receives full term sheet; preliminary indication of interest
3	Technical Due Diligence	Week 2–3	Architecture review, code access, security documentation, HIPAA/SOC2 review
4	Commercial Due Diligence	Week 2–3	Customer references (Fortune 500 clients), pipeline validation, ClinixAI provider interviews
5	Legal & Financial Diligence	Week 3–4	Cap table, IP assignments, client contracts, financial model, expense history
6	Close	Week 4–6	Signed term sheet, definitive agreements, wire transfer, board seat appointment
