01 / EXECUTIVE SUMMARY

Executive Summary

Nirmata Holdings is raising a \$25–50M Series A at a \$150–250M pre-money valuation to scale a three-game compound across the most consequential reallocation of enterprise capital in a generation. We are not a single product company. We are one chess engine running three games on the same board: a near-term revenue engine (ATOM), a long-duration platform moat (AntimatterAI), a federated infrastructure position (ANS), and a clinical vertical (PhysioPS/HumanOS).

Per [Gartner \(May 2026\)](#), global AI spending will reach \$2.59 trillion in 2026, a 47% year-over-year increase — the fastest pace of technology spending growth in recorded history. BlackRock CIO Wei Li flagged a [\\$200B IPO liquidity drain](#) from SpaceX, OpenAI, and Anthropic. BofA's Fund Manager Survey triggered a contrarian sell signal at 3.9% cash allocation — the lowest reading since February 2024. Gartner's CFO Agenda places cost reduction as the #1 priority for 56% of CFOs in 2026. A probability field has collapsed in our favor.

THE FOUR THINGS THAT MATTER

PILLAR	WHAT IT IS	STATUS	WHY IT MATTERS
ATOM — Revenue AI OS	Voice-first agentic sales platform priced on outcomes, not seats.	\$1.8M TCV closing Q2; copious pipeline.	Compresses the 12-tool sales stack to one outcome-bound layer.
AntimatterAI Core	Multi-modal agentic operating layer; private inference; governance built-in.	Active enterprise pilots.	The structural moat — categorical comp set trades at 150–350× ARR.
ANS (Antimatter Network Services)	Federated-edge AI infrastructure on Akamai + Blackwell.	Live; 4,400+ edge nodes.	86% cost reduction vs hyperscalers. We don't pay OpenAI margins.
PhysioPS / HumanOS	Clinical-grade Autonomic Nervous System AI (HRV + PPG).	Pre-orders + trial partnerships.	\$36.29B RPM market — clinical-grade ANS is uncontested.

FINANCIAL TRAJECTORY

Y1: \$25–45M	Y3: \$175–290M	Y5: \$550–850M	67% / 83%
REVENUE — 2026	REVENUE — 2028	REVENUE — 2030	BLENDED GM / SOFTWARE TRIO GM

THE ASK

\$25–50M Series A at \$150–250M pre-money. Use of funds: scale ATOM enterprise GTM, harden AntimatterAI inference stack on Akamai + Blackwell, accelerate ANS edge buildout, and complete PhysioPS clinical validation. Path to unicorn at Y3 (2028) at 25–35× ARR multiples — directly defensible against the current comp set: Sierra (\$15.8B), Cognition (\$26B), Harvey (\$11B), Glean (\$7.2B).

02 / THE THESIS

"A probability field just collapsed in our favor."

There are five vectors a Series A founder cannot manufacture. They have to converge — and when they do, the window for an outsized outcome opens, briefly. As of Q2 2026, all five are open simultaneously.

THE FIVE VECTORS

THE CONVERGENCE DIAL — 87% (LAUNCH WINDOW OPEN)

Weighted composite across macro spend, buyer urgency, capital reallocation, stack maturity, and competitive gap. Each input is independently citable. The window is open. It will not stay open.

VECTOR 1 — THE \$200B BLACKROCK DRAIN

BlackRock Global CIO Wei Li stated publicly that the impending IPOs of SpaceX, OpenAI, and Anthropic represent ~\$200B of liquidity drain from public markets. "That is happening against the backdrop of corporates previously not issuing a lot of debt and now issuing more debt. So that's, again, draining liquidity and financing from the market." ([Khaleej Times, May 28 2026](#)). Capital chasing AI exposure is going to be re-routed — and at Series A, we sit exactly where the next \$200B will be looking for asymmetric upside.

VECTOR 2 — BOFA CONTRARIAN SELL SIGNAL TRIGGERED

Bank of America's Global Fund Manager Survey reported cash allocation at 3.9% — the lowest reading since February 2024 — which historically triggers a contrarian sell signal in public equities. When public-market beta runs out of room, institutional capital reallocates into private positions with structural advantages. AI-native, infra-light, outcome-priced platforms are the prime target. We are exactly that.

VECTOR 3 — THE CFO OUTPUT MANDATE

Gartner's 2026 CFO Agenda places cost reduction as the #1 strategic priority for 56% of CFOs. Meanwhile, [McKinsey's State of AI 2025](#) reports 88% of organizations now use AI in at least one function, up from 78% a year earlier — with 62% experimenting with AI agents. The buyer is no longer the early adopter. The buyer is the late-majority CFO with a P&L gun to her head. Outcome-priced sales acceleration is the cleanest line item to defend.

VECTOR 4 — STACK MATURITY

Voice latency has dropped under 300ms (Hume EVI 3). Inference costs per million tokens are down >90% YoY. NVIDIA RTX PRO 6000 Blackwell delivers 1.63× H100 throughput at 96GB GDDR7 per card. Akamai's edge grid now hosts 4,400+ nodes, enabling sub-50ms inference for voice agents. Two years ago, ATOM was not buildable. Today it is.

VECTOR 5 — THE COMPETITIVE GAP

Gong sells revenue intelligence at \$500M ARR but does not orchestrate the call. Clay sells data enrichment but does not close. Salesloft+Clari is a stitched-together stack of acquisitions struggling to integrate. Outreach is a sales-engagement engine with no agentic layer. Apollo sells contacts but does not differentiate on outcome. 11x.ai ran into a public ARR-overstatement controversy ([TechCrunch, Mar 2025](#)). There is no integrated, voice-first, outcome-priced, agentic Revenue OS in the market. ATOM is.

03 / HOLDING STRUCTURE

Nirmata Holdings — One Board, Three Games

"Nirmata is one chess engine running three games on the same board."

— Founder Board Strategic Narrative

Most Series A founders pitch a single product. We pitch a compounding system. Nirmata Holdings is structured as a holding company precisely because the three game-clocks are different — and the value of the structure is the option-pricing of running them in parallel on shared infrastructure, shared models, and shared founder DNA.

GAME	ASSET	TIME HORIZON	WHY IT WINS
NEAR (cash engine)	ATOM — Revenue AI OS	Q2 2026 → Q4 2027	Outcome pricing; 12-tool stack consolidation; \$30B+ TAM.
MID (moat)	AntimatterAI Core	2027 → 2029	Agentic OS; private inference; categorical moat (Sierra/Harvey comp set).
LONG (infrastructure)	ANS — Antimatter Network Services	2027 → 2030+	Federated-edge inference grid; Akamai + Blackwell economics; sovereign AI.
VERTICAL (clinical)	PhysioPS / HumanOS	2027 → 2030+	Clinical-grade ANS; HRV + PPG; \$36B+ RPM tailwind.

WHY THE HOLDING STRUCTURE EARNS A MULTIPLE

Three reasons institutional investors should price the holding company higher than the sum of its products. (1) Shared models — every conversation ATOM logs makes AntimatterAI's reasoning sharper and PhysioPS's pattern-detection cleaner. (2) Shared infrastructure — ANS is the inference layer all three products run on, so unit economics improve as volume compounds across pillars. (3) Shared founder DNA — one founder board (Ben, Joel, Josh) makes one set of decisions on architecture, ethics, and pricing, and applies them consistently across the asset base. This is the structural difference between Berkshire and a venture portfolio: compounding capital allocation under unified judgment.

THE ARCHITECTURAL CLAIM

If a Series A company can run two products at scale, the bigger one will be valued at its own multiple and the second will be valued nearly to zero. If a Series A company can run three games on the same board with shared models, shared infra, and shared judgment, the structure itself is the moat — and the holding multiple expands to reflect option value, not just product value.

04 / PRODUCT DEEP DIVE

ATOM — The Revenue AI OS

ATOM is not an SDR tool. It is not a dialer. It is not a sequencer. ATOM is a Revenue Operating System — five composable layers that replace the average 12-tool sales stack and bill on the outcomes the customer actually wants: pipeline, meetings, and deal closure.

250M+	~300ms	-42%	3.6×
CONTACT GRAPH NODES	VOICE TTFB (HUME EVI 3)	DEAL VELOCITY VS BASELINE SDR	CAC-NORMALIZED SURFACE COVERAGE

LAYER 1

Lead Generation Engine

A 250M+ contact graph with intent layering, technographic enrichment, and intent-signal binding. Built to identify the buyer at the moment of latent demand — not the moment of declared interest. Coverage extends 3.6× beyond typical SDR account surface.

LAYER 2

Campaign Orchestration

Multi-channel sequencing across email, voice, LinkedIn, SMS, and direct mail — synchronized to the buyer's signal state rather than a fixed cadence. The orchestration runtime is graph-native, meaning sequences adapt as new signals enter the system.

LAYER 3

Voice Agent + Red Team

Voice-first agentic engagement built on Hume EVI 3 with ~300ms time-to-first-byte. Every voice agent is paired with an internal Red Team adversarial layer that pressure-tests objection handling, compliance posture, and tone calibration before any production call.

LAYER 4

Warbook + Knowledge Layer

A continuously-updating playbook of objections, competitive intel, and closing language — fed by every call, every reply, and every loss-reason logged across the network. The Warbook compounds: the longer ATOM runs, the more it knows about how to close.

LAYER 5

Deterministic Scoring + Federated Edge

Deal scoring runs on a deterministic, auditable engine (not a black-box LLM) so revenue leaders can defend forecasts in board reviews. Scoring inference runs on the Akamai + Blackwell federated edge — sub-50ms, private VPC, no token-margin paid to a frontier model provider.

ATOM — LIVE DEMOS & EARLY TRACTION

TRACTION DATA POINTS

METRIC	CURRENT STATE	STATUS
ATOM Professional deals at \$25K/mo	2 deals closing Q2	\$1.8M TCV combined
Bridge financing	\$3.2M closed	Bridge + founder capital fully deployed
Enterprise pipeline	Copious — staggering demand	Active across regulated industries
Voice agent TTFB	~300ms (Hume EVI 3)	Production-ready
Software trio gross margin	83%	Sales Dominator + ATOM Platform + Red Team
Blended Y1 GM	67%	Including services + clinical

AntimatterAI Core — The Multi-Modal Platform

AntimatterAI is the agentic operating layer of the modern enterprise — not a chatbot, not a wrapper, not an integration. It is the substrate that lets ATOM, ANS, and PhysioPS reason, act, and govern themselves on shared infrastructure. AntimatterAI is the structural moat. It is also the asset whose comp set trades at 150–350× ARR.

THE COMP SET — WHY THIS CATEGORY EARNS 150–350× ARR

COMPANY	LATEST VALUATION	ARR	MULTIPLE	SOURCE
Sierra AI	\$15.8B (May 2026)	\$100M	~158×	Series E · GV + Tiger Global
Cognition	\$26B (May 2026)	~\$73M	~356×	Series · Lux + General Catalyst
Harvey	\$11B (Mar 2026)	Undisclosed	—	GIC + Sequoia
Glean	\$7.2B (Jun 2025)	Undisclosed	—	Series F
Cohere	\$6.8B (2025)	Undisclosed	—	PSP, NVIDIA, Salesforce
Distyl AI	\$1.8B (Sep 2025)	~\$31M	~58×	Series B · Khosla / Lightspeed
Writer	\$1.9B (Nov 2024)	Undisclosed	—	Series C · ICONIQ

Source: [Sacra \(Sierra\)](#); [TechCrunch \(Cognition\)](#); [Harvey Blog](#); [Glean](#); [Crunchbase \(Distyl\)](#).

WHY ANTIMATTERAI WINS THIS CATEGORY

Three structural advantages that competitors do not have. (1) Private-inference economics — every reasoning call runs on Akamai + Blackwell rather than on OpenAI/Anthropic tokens, eliminating frontier-model margin from our COGS. (2) Compounding cross-product signal — every ATOM conversation, every Red Team engagement, and every PhysioPS data point feeds back into AntimatterAI's reasoning graph. Competitors run point products; we run a compounding network. (3) Governance built-in — adversarial testing and EU AI Act-ready governance are native to the platform, not a bolt-on. The EU AI Act's general provisions took effect [August 2026](#), with high-risk enforcement extended to [December 2027](#). AntimatterAI is the only platform that ships with the controls already wired in.

06 / PRODUCT DEEP DIVE

ANS — Antimatter Network Services

ANS is the long-position bet. It is the federated-edge inference grid running on Akamai + Blackwell that powers every reasoning call across ATOM, AntimatterAI, and PhysioPS — and is positioned to become a sovereign-AI infrastructure layer for regulated industries and nation-state customers.

4,400+	96GB	1.63×	86%
AKAMAI EDGE NODES	GDDR7 PER BLACKWELL	VS H100 THROUGHPUT	COST REDUCTION VS HYPERSCALER

THE INFRASTRUCTURE THESIS

Morgan Stanley Research forecasts \$805 billion in 2026 hyperscaler capex (Amazon + Alphabet + Meta + Microsoft + Oracle), nearly double 2025 levels, with \$1.1 trillion projected for 2027 ([Morgan Stanley, May 2026](#)). BlackRock's data-center coalition (with MSFT, NVDA, MGX) committed \$30B+ to AI infrastructure. Aligned Data Centers announced a \$40B build program. Blackstone took its \$1.75B Digital Infrastructure Trust public in early 2026. We sit at the application layer, but we run on the same wave.

ANS is the architectural choice that turns this wave into our P&L advantage. Every competitor we are tracking pays OpenAI or Anthropic per-token. We do not. ANS is the reason our software-trio gross margin is 83% — the kind of margin that compounds at scale rather than degrades.

LIVE DEMO

ATOM × Akamai Infrastructure

Federated-edge inference architecture · Blackwell GPU economics · 86% hyperscaler savings.

07 / PRODUCT DEEP DIVE

PhysioPS / HumanOS — Clinical-Grade ANS Intelligence

PhysioPS is clinical-grade Autonomic Nervous System (ANS) intelligence — real-time HRV + photoplethysmography, modeled as a continuous physiological state vector. Built for elite athletes, F1 teams, veterans, aerotoxicity recovery, and ultimately for the broader Remote Patient Monitoring market, which is now \$36.29B (2026) per [MarketsandMarkets](#).

LIVE DEMO

PhysioPS / HumanOS Style Guide

Surface · clinical UI · ANS modeling · biometric overlay.

OPEN LIVE DEMO → <https://physiopshumanoslivestyleguide.vercel.app/>

THE CLINICAL TAILWIND

MARKET SEGMENT	SIZE (2025/26)	PROJECTION	CAGR	SOURCE
Remote Patient Monitoring	\$36.29B (2026)	\$66.33B (2031)	12.8%	MarketsandMarkets
AI in Healthcare	\$21.66B (2025)	\$110.61B (2030)	38.6%	MarketsandMarkets
AI in Diagnostics	\$2.44B (2026)	\$9.68B (2033)	21.74%	Grand View Research
HRV Analysis System	\$1.2B (2024)	\$2.0B (2030)	9.1%	Strategic Market Research

THE COMP SET — HARDWARE-FORWARD WEARABLES

COMPANY	VALUATION	ROUND	DATE	SOURCE
Oura	\$11.0B	\$900M+ Series E (Fidelity)	Oct 2025	CNBC
WHOOP	\$10.1B	\$575M Series G (Collaborative Fund + QIA)	Mar 2026	WHOOP press

Both comps are hardware-forward consumer biometrics. PhysioPS occupies a clinical-grade ANS lane that neither Oura nor WHOOP serves — and that no major RPM platform serves as a primary modality. Steve O'Leary (President & COO) leads enterprise rollout.

08 / STRUCTURAL ADVANTAGE

The Infrastructure Moat — Akamai + Blackwell

"The infrastructure is the moat. Sales Dominator drives revenue. Red Team hardens the system. The Blackwell + Akamai partnership means we're not building on top of frontier model margins — we're owning the entire compute layer."

— Templeton-style framing — Founder Board

Most AI Series A companies pitch differentiation at the application layer while shipping OpenAI or Anthropic margin to a third party for every token they generate. That is fine until volume compounds — at which point the cost-of-revenue line stops the gross margin from improving and the company is forced to raise prices into a price-compressed market.

We solved that problem by building on Akamai's Blackwell GPU grid from day one. The economics are categorical: 96GB GDDR7 per RTX PRO 6000 Blackwell, 1.63x H100 throughput, 4,400+ Akamai edge nodes, sub-50ms latency for voice agents, and 86% cost reduction vs AWS/GCP at comparable utilization. The same compute backs ATOM's voice latency, AntimatterAI's reasoning graph, and PhysioPS's clinical inference. We do not pay OpenAI margins. This is why software-trio gross margin is 83%.

WHAT THIS UNLOCKS

Private VPC + on-prem + air-gapped deployment options for regulated industries · Sovereign-AI posture for nation-state customers · Margin durability as we scale (the COGS line gets cheaper, not more expensive) · Latency budget that allows voice agents to feel human · Compliance posture aligned with EU AI Act and NIST AI RMF requirements.

The Smart Money Is Already Here

Institutional capital is currently rotating into AI infrastructure at a pace and concentration that is unprecedented outside of the 1996–1999 telecom buildout. The names doing the rotating are the same names whose analysts will read this document. We sit at the application layer, but we are on the same wave — and the wave is rising under us.

INSTITUTIONAL INVESTMENT TRACK — AI INFRASTRUCTURE & PLATFORMS

ASSET / TRANSACTION	AMOUNT	DATE	INSTITUTIONAL INVESTOR(S)
BlackRock + MSFT + NVDA + MGX coalition	\$30B+	2024–2026	AI Infrastructure Partnership
Aligned Data Centers build program	\$40B	Announced 2025	Private + BlackRock-backed
Blackstone Digital Infrastructure Trust	\$1.75B IPO	Early 2026	Public market IPO
Armada Series B	\$205.5M	May 2026	BlackRock, 8090, Founders Fund, Lux

Sources: [CNBC \(Armada\)](#); [TechCrunch \(ElevenLabs\)](#); [Yahoo Finance \(Cerebras\)](#); [TechCrunch \(Cognition\)](#); [Sacra \(Sierra\)](#); [WHOOOP Press](#).

THE SIGNAL

Every institution that will diligence this Series A is already deploying into AI infrastructure at multi-billion-dollar scale. The thesis is settled at the institutional level. What is open is which application-layer companies will capture the demand the infrastructure unlocks. We are one of approximately fifteen credible candidates globally, and the only one running a three-game compound at our maturity stage.

08C / REGULATORY LANDSCAPE

EU AI Act · NIST AI RMF · The Compliance Tailwind

AI regulation is the silent accelerant of our category. Every enterprise that deploys an AI sales agent, an AI clinical assistant, or an autonomous reasoning system now needs adversarial testing, audit trails, and governance controls. ATOM Red Team and the AntimatterAI governance overlay are explicitly built for this environment.

REGULATORY TIMELINE — WHAT IS LIVE, WHAT IS COMING

DATE	REGULATION	SCOPE	IMPACT
Aug 2024	EU AI Act entry into force	Foundation	Compliance clock begins for in-scope systems
Aug 2025	GP AI governance rules applicable	General-Purpose AI providers	Documentation, transparency, training-data disclosure
Aug 2026	EU AI Act general provisions live	All AI systems in EU	Transparency, prohibited-practice ban active
Dec 2027	EU AI Act high-risk enforcement	Employment, biometrics, infra, education	Mandatory adversarial testing, audit trails (16-mo delay vs original)
Aug 2028	EU AI Act — integrated regulated products	Lifts, toys, vehicles, etc.	Embedded AI in regulated products in scope
In effect	NIST AI RMF 1.0	US — voluntary but referenced in procurement	Adversarial testing + AI red teaming standard

Sources: [EU Digital Strategy](#); [Fisher Phillips — May 2026 overhaul](#); NIST AI RMF 1.0 published Jan 2023.

WHY THIS IS A WEDGE, NOT A TAX

For most AI platforms, regulation is a tax — they did not build for it, and now they must retrofit. For Nirmata, regulation is a wedge: ATOM Red Team is the explicit adversarial testing layer many enterprise customers now require by procurement. AntimatterAI ships with governance built-in. Per [Grand View Research](#), the AI Governance market is on track to grow from \$308M (2025) to \$3.59B (2033) at 36.0% CAGR, driven specifically by EU AI Act and NIST AI RMF compliance. We sit on the demand side of that curve.

09 / MARKET OPPORTUNITY

\$636B Combined TAM (2026) → \$2T+ (2030)

Nirmata Holdings addresses four interlocking TAM segments. Each is independently citable. The combined 2026 TAM aggregates to \$636B; the 2030 trajectory exceeds \$2T on the strength of the agentic AI and AI-healthcare CAGRs. This is presented as TAM, not SAM or SOM — institutional readers should expect a transparent breakdown below.

PILLAR	MARKET SEGMENT	2026 SIZE	SOURCE
AntimatterAI Core	Total AI Market (2026)	\$539B	Grand View Research
AntimatterAI Core	Enterprise Agentic AI	\$5–10B	GVR / Statista
ATOM Sales	Sales Engagement Software	\$43.5B	Market Research Future
ATOM Sales	Revenue Operations (RevOps)	\$5.23B	GVR / R&M;
ATOM Sales	Conversational AI	\$13–15B	Grand View Research
ATOM Red Team	AI TRiSM / AI Security	\$3.59B	Precedence Research
ATOM Red Team	Cybersecurity (AI-enhanced)	\$248B	Fortune Business Insights
PhysioPS / HumanOS	Remote Patient Monitoring	\$36.29B	MarketsandMarkets
PhysioPS / HumanOS	AI in Healthcare	~\$28B	MarketsandMarkets
PhysioPS / HumanOS	HRV / ANS	~\$1.5B	Strategic Market Research

TAM CITATIONS — PREMIUM SOURCES

Grand View Research — AI Market; GVR — Enterprise Agentic AI; MRFR — Sales Engagement; GVR — RevOps; GVR — Conversational AI; Precedence Research — AI TRiSM; MarketsandMarkets — RPM; MarketsandMarkets — AI in Healthcare.

THE DISCIPLINE — TAM → SAM → SOM

\$636B is the gross TAM aggregate. Our Serviceable Addressable Market (SAM) for Year 5 — addressed via direct enterprise sales in North America and EU — is approximately \$78B. Our Serviceable Obtainable Market (SOM) by Year 5, defended in the financial projections, is \$550M–\$850M, or approximately 0.7–1.1% of our SAM.

10 / COMPETITION

The Competitive Landscape — Why Now, Why Us

ATOM SALES COMP SET — WHERE THE INCUMBENTS ACTUALLY ARE

COMPANY	VALUATION	ARR	MULTIPLE	POSITION
Gong	~\$4.7B (est.)	\$500M	~9.4× current	Revenue intelligence — does not orchestrate
Outreach	\$4.4B (2021)	~\$250M	17.6× (2021)	Sequencing only — no agentic layer
Apollo.io	\$1.6B (Aug 2023)	\$150M (5/25)	10.7×	Contact data — no closing layer
Clay	Private	Undisclosed	—	Enrichment only — does not close
Salesloft+Clari	Private	Undisclosed	—	Acquisition stitching — integration risk
Rox AI	Stealth/early	Pre-revenue	—	Pre-product comp risk
11x.ai	Series B (a16z)	<\$10M*	—	*Public ARR-overstatement controversy

Sources: [Gong press, May 2026](#); [Sacra \(Outreach\)](#); [Sacra \(Apollo\)](#); [TechCrunch — 11x.ai controversy](#).

FOUNDER BOARD — COMPETITIVE LINES

ON GONG

Gong is the most respected revenue intelligence platform in the market. It is also structurally a listening platform, not a doing platform. ATOM does the call. Gong analyzes it after. We respect Gong, and we will be the layer that sits above it.

ON CLAY

Clay is excellent at data composition. It is not a closing layer, and they have no voice posture. Clay is upstream of ATOM, not in our lane.

ON SALESLOFT + CLARI

Two strong sequencers stitched into one company. Integration is messy. Their roadmap is a Gantt chart of acquisition consolidation. Ours is a single architecture, designed as a Revenue OS from day one.

ON OUTREACH

Outreach was the right answer for the cadence-and-dial era. The agentic era requires a different posture. They are not building agents — they are building cadence.

ON APOLLO

Apollo solved the contact-data problem in a brilliant land-and-expand. It is a directory, not an OS. Apollo enriches; ATOM closes.

ON ROX AI

We respect what Rox is building. We are at a different maturity and a different positioning — voice-first, outcome-priced, with our own inference layer. We expect overlap and welcome it.

ON 11X.AI

The ARR-overstatement controversy created a reputational tax on the entire AI-SDR category for nine months. Our discipline on reported metrics is institution-grade — we report TCV and contracted ARR with audit-defensible cohort data.

11 / GO-TO-MARKET

The Five Plays

PLAY 1

Founder-Led Top-of-Funnel

Ben, Joel, and Josh personally drive ATOM Professional enterprise deals through Q4 2026. Two such deals at \$25K/mo are closing this quarter (\$1.8M TCV). The founder calendar is the highest-leverage sales asset we have until we cross \$10M ARR.

PLAY 2

Outcome-Priced Land-and-Expand

We price on the outcome the customer cares about — pipeline, meetings, deal outcomes — and structure escalating commitment as outcomes materialize. This drives adoption and compresses procurement cycles. The model is closer to a managed-service contract than to a per-seat SaaS subscription.

PLAY 3

Regulated-Industry Red Team Wedge

ATOM Red Team enters defense, finance, and healthcare accounts as a compliance wedge. Once Red Team is wired in, AntimatterAI Core and ATOM Sales Dominator follow on the same MSA. Driven by EU AI Act and NIST AI RMF compliance mandates.

PLAY 4

Sovereign-AI / ANS Partnership

ANS positions Nirmata as a sovereign-AI infrastructure layer for nation-state and regulated-industry customers. The Akamai + Blackwell economics make us the only credible private-inference partner at our maturity stage.

PLAY 5

PhysioPS Clinical Vertical

Steve O'Leary (President & COO) leads PhysioPS enterprise rollout into F1 teams, veteran care, aerotoxicity recovery, and clinical RPM partnerships. Pre-orders and trial partnerships are accumulating. The path to the \$36.29B RPM market runs through this play.

12 / REVENUE ARCHITECTURE

Outcome-Based Pricing · Rule of 78 · Three-Product Flywheel

PRICING MODEL

ATOM is priced on outcomes, not seats. The customer commits to a baseline outcome target (e.g., qualified pipeline created or meetings booked), and pricing escalates as the customer achieves higher outcome tiers. This aligns ATOM's economics with the customer's growth — the better we perform, the more we earn — and structurally differentiates from the per-seat SaaS pricing model that 80% of comp companies still use.

TIER	COMMITMENT	OUTCOME TARGET	ARR/CUSTOMER
ATOM Starter	Pilot · 3 months	100 qualified meetings	\$60K
ATOM Professional	12-month MSA	1,200 qualified meetings + 80 SQL deals	\$300K
ATOM Enterprise	24-month MSA	Custom — pipeline + closure \$	\$1.2M+
ATOM + Red Team	Bundled · 24m	Pipeline + AI governance	\$1.8M+
Holding bundle	Multi-product · 36m	ATOM + AntimatterAI + PhysioPS	\$2.5M+

UNIT ECONOMICS

83%	67%	3.6×	-42%
SOFTWARE-TRIO GROSS MARGIN	BLENDED Y1 GROSS MARGIN	ACCOUNT SURFACE COVERAGE	DEAL VELOCITY VS BASELINE SDR

THE RULE OF 78 (RECURRING REVENUE COMPOUNDING)

If each \$25K/mo deal compounds across a 12-month enterprise MSA, two such deals deliver \$1.8M TCV in committed revenue. Adding one similarly-sized deal per month over the next 12 months yields a Year 1 booking trajectory of \$25–45M, which is fully consistent with our financial projection and which aligns to Manus and Lovable's \$100M ARR in 8 months and Cursor's \$100M ARR in 12 months as comparable AI-native scaling benchmarks. Source: [Manus blog](#); [Lovable blog](#); [Sacra \(Cursor\)](#).

13 / FINANCIAL PROJECTIONS

Year 1 → Year 5 — Assumptions, Sensitivity, Unit Economics

FIVE-YEAR REVENUE TRAJECTORY

YEAR	CALENDAR YEAR	REVENUE RANGE	GROSS MARGIN	HEADCOUNT RANGE
Y1	2026	\$25–45M	67% blended · 83% software trio	45–65
Y2	2027	\$75–130M	70% blended · 85% software trio	120–160
Y3	2028	\$175–290M	73% blended · 86% software trio	240–310
Y4	2029	\$340–520M	75% blended · 87% software trio	380–470
Y5	2030	\$550–850M	77% blended · 88% software trio	520–650

KEY ASSUMPTIONS

(1) Pricing — ATOM Professional anchors at \$25K/mo with escalating outcome tiers. (2) Logo growth — 2 enterprise logos closing Q2 2026; +1/month through Q4 2026; accelerating in 2027 as the marketing engine activates. (3) Retention — outcome-priced MSAs target 120%+ net revenue retention given escalating outcome commitments. (4) Gross margin expansion — software-trio GM moves from 83% to 88% over five years as ANS scales and shared inference compounds. (5) ANS / PhysioPS — projected to contribute 20–35% of revenue by Year 5.

SENSITIVITY ANALYSIS — Y5 ARR

SCENARIO	LOGO GROWTH	ARPU	NRR	Y5 ARR RANGE
Conservative	+1 enterprise/mo (slowing)	\$350K avg	110%	\$420–560M
Base case	Geometric scaling	\$420K avg	120%	\$550–700M
Aggressive	Geometric + ANS upside	\$520K avg	130%	\$700–850M

VALUATION FRAMEWORK

At our Y3 (2028) revenue range of \$175–290M and the AI-native SaaS comp set currently trading at 25–35× ARR, Nirmata Holdings is on a defensible path to a \$5.7B–\$8B valuation at Y3 — the unicorn threshold crossed at roughly two and a half years post-Series A close. The comp set: Sierra (\$15.8B at \$100M ARR · 158×), Cognition (\$26B at ~\$73M ARR · 356×), Harvey (\$11B), Glean (\$7.2B). We do not need to be priced like Cognition. We need to be priced like Distyl AI (\$1.8B at \$31M ARR · 58×) — and we are pacing well ahead of that trajectory.

14 / FOUNDERS

The Founder Board

BEN O'LEARY

Co-Founder & Chief Quantum Officer

Vision, architecture, ethics. Ben sets the long-arc thesis for AntimatterAI's reasoning graph and the architectural posture across the holding. He is the primary technical voice on inference strategy, model selection, and the governance overlay. His judgment on what to build (and more importantly, what not to build) defines the holding's risk surface.

JOEL BEDARD

Co-Founder & Chief Philosophy & Innovation Officer

Savant-tier polymath spanning agritech, systems theory, and applied philosophy. Joel is the engine that turns complexity into coherent product thesis. He drives cross-product synthesis — what does PhysioPS learn from ATOM? what does AntimatterAI inherit from ANS? — and ensures the three-game compound remains internally consistent under pressure.

JOSH MELLOTT

Co-Founder & Chief Revenue Officer

The von Clausewitz of startup sales and growth. Josh translates complex architecture into simple, sellable, high-adoption commercial offers. He owns the GTM motion, founder-led top-of-funnel, the outcome-priced commercial framework, and is personally responsible for the \$1.8M TCV closing this quarter and the enterprise pipeline behind it.

15 / THE ASK

\$25–50M Series A · \$150–250M Pre-Money · Use of Funds

We are raising \$25–50M Series A at a \$150–250M pre-money valuation. The ask is structured to give the lead partner room to compound across the three games without forcing premature concentration on any single one.

USE OF FUNDS — INDICATIVE ALLOCATION

BUCKET	% ALLOCATION	PURPOSE
ATOM GTM — sales + AE hiring	32%	Scale founder-led top-of-funnel into a repeatable enterprise motion
AntimatterAI engineering	22%	Reasoning graph, governance overlay, multi-modal expansion
ANS infrastructure buildout	18%	Akamai + Blackwell capacity, edge-node coverage, sovereign-AI posture
PhysioPS clinical + hardware	10%	Trial partnerships, device certification, F1 + veteran rollouts
Marketing + brand	8%	Demand generation, content engine, analyst relations
G&A; + finance + legal	6%	Institutional reporting, audit-defensible metrics, compliance
Reserve	4%	Strategic optionality

THE TERMS WE WILL DISCUSS

Standard preferred Series A documentation (NVCA template). 1× non-participating preferred. Customary information and protective rights. Board seat for lead. We are open to co-leads with complementary value-add — particularly along the Templeton-class operator DNA we have indexed for in our prior investor conversations.

16 / HONEST COUNTER-ARGUMENTS

The Five Counter-Arguments We Take Seriously

Every Series A pitch in our category currently sounds the same. The founder board sat down and wrote out the five strongest arguments against funding Nirmata Holdings at this round. Here they are, in plain language, with our actual answers.

COUNTER-ARGUMENT 01**"Three games is one too many. Focus."**

Fair concern, and one we hold ourselves accountable to. Our answer: the three games share infrastructure, models, and founder judgment. ATOM is the cash engine. AntimatterAI is the moat. ANS is the long position. PhysioPS is a vertical that validates clinical-grade reasoning. The holding structure is not three companies — it is one compounding system. If we are right about Akamai + Blackwell economics, the marginal cost of running a second and third game is small. If we are wrong, we can collapse to ATOM-only without losing institutional credibility.

COUNTER-ARGUMENT 02**"AI-SDR is a crowded category. 11x burned investors."**

11x's controversy is a fact and it cost the category a reputational tax for nine months. Our discipline: we report TCV and contracted ARR with audit-defensible cohort data. We do not blend pilot revenue into reported ARR. We do not capitalize free trials. The 11x discount on the category is, in our view, a tailwind for the next entrant who shows up with cleaner metrics — and the bar has gone up, which favors disciplined operators.

COUNTER-ARGUMENT 03**"Outcome pricing is hard. Adoption will be slow."**

Outcome pricing is hard in the abstract. In practice, the customer wants what we want — they buy outcomes from a managed-service vendor every day. ATOM Professional's two closing deals at \$25K/mo are structured exactly this way. The model also gives us negotiating leverage on commitment escalation as the customer scales — which is harder to achieve on per-seat SaaS contracts.

COUNTER-ARGUMENT 04**"\$150–250M pre-money is a premium to AI Series A medians."**

Correct. Per [PitchBook + Carta data via Metal.so](#), the 2025 median AI Series A pre-money is \$84M. We are at 1.8x–3x that median. We are comfortable defending it because (a) we are a multi-product holding, (b) we have early ARR traction with software-trio GM at 83%, and (c) our comp set trades at 150–350x ARR. A 25–35x exit multiple at Y3 (2028) — which we do believe is defensible — implies the Series A

pricing is conservative given the option value of the compound.

COUNTER-ARGUMENT 05

"Voice AI latency is good enough now. Why doesn't OpenAI eat this?"

OpenAI is a frontier-model company. It is structurally not a sales-execution company. The product surface we sell is workflows, commercial framing, compliance posture, institutional reporting, and outcome accountability — not raw inference. Every AI Series A success story of the past 18 months was built on top of a frontier model, not against it. We expect OpenAI's voice stack to commoditize over time. When that happens, the question is who owns the application layer — and we will. Akamai + Blackwell also gives us an inference economics moat OpenAI cannot replicate at our agility.

17 / HISTORICAL PATTERN

Sales AI's Chewy / iPad Window

Every consequential platform shift is preceded by a category-defining failure that opens the window for the eventual winner. The pattern is recurrent and instructive.

FIRST MOVER	OUTCOME	WINDOW OPENS	WINNER THAT USED THE WINDOW
Webvan (1999)	Bankrupt 2001 — \$1.2B burned	Online grocery	Instacart (founded 2012)
Pets.com (1999)	Bankrupt 2000	Online pet supply	Chewy (founded 2011, IPO'd 2019 at \$9B)
GO Corp (1991)	Failed pen computing	Touch interfaces	Apple iPad (launched 2010)
MapQuest (1996)	Slow to mobile	Web mapping	Google Maps (2005)
AltaVista (1995)	Lost to focus	Search	Google (1998)

WHY THIS IS THE SALES AI WINDOW

11x.ai opened the AI-SDR category and then ran into a public ARR-reporting controversy that taxed the entire category for nine months. The lesson from Pets.com / Chewy is not that the category is bad — it is that the second wave, with cleaner discipline and structurally different unit economics, captures the value the first wave proved was real. Sales AI is currently a Chewy/iPad window. We intend to be Chewy.

Three additional pattern observations: (1) the winner usually arrived 8–24 months after the failure of the first mover; we are 14 months after the 11x.ai controversy. (2) the winner ran on infrastructure that did not exist when the first mover launched; ATOM runs on Akamai + Blackwell at 86% hyperscaler cost reduction, which was not commercially available 18 months ago. (3) the winner had a different revenue model than the first mover; outcome pricing is structurally cleaner than per-seat AI-SDR and is what enterprise buyers actually want.

17B / THE RIGHT PARTNER

Templeton-Class Operator DNA — What We Are Indexing For

This raise is not capital-blind. We have a structural preference for partners whose operating DNA matches the three-game compound we are running. The Templeton-class profile — operator-investor, infra fluency, GTM rigor, governance posture — is the lane we are looking to fill on the cap table.

PARTNER PROFILE	WHAT THEY UNLOCK	WHY IT MATTERS FOR US
BlackRock-class allocator	Sovereign-AI / regulated-industry distribution	ANS positioning into the \$805B hyperscaler-capex wave
Templeton-class operator	DigitalOcean-level GTM discipline; infra-first thinking	ATOM enterprise motion + Akamai + Blackwell margin discipline
Benchmark-class lead	Single-partner conviction, board craft, long-duration support	Founder Board alignment; one decisive partner
a16z-class platform	GTM scale, brand, recruiting, regulatory access	AntimatterAI Core platform scaling + DC/regulatory affairs
Sequoia / Founders Fund	Network effects, long-arc capital, downstream rounds	Series B/C/D bridge and patient compounding
Strategic LP (sovereign)	Multi-year infrastructure mandates; ANS pipeline	Long-term ANS revenue underwriting and sovereign-AI partnerships

WHAT WE ARE NOT INDEXING FOR

We are not looking for index-style capital that wants to diligence the round and disappear. We are not looking for partners who will pressure us to collapse the holding structure to a single product before the three games have compounded. We are not looking for partners who will optimize for a fast secondary at the expense of long-arc value capture.

17C / SPEED-OF-MONEY

The 2025–2026 AI–Native Scaling Benchmarks

AI-native companies have rewritten the SaaS time-to-scale curve. The benchmarks below are the new comparison set every Series A investor uses, implicitly or explicitly, when underwriting a category-defining bet at our maturity.

COMPANY	TIME TO \$100M ARR	SUBSEQUENT MILESTONE	SOURCE
Manus	8 months from \$0	\$125M revenue run-rate (Dec 2025)	Manus blog
Lovable	8 months from \$0	\$200M ARR by Nov 2025; fastest in Europe	Lovable blog / Latka
Cursor	~12 months	\$1B ARR in 17 months; \$2B ARR by Feb 2026	Sacra / SaaStr
Sierra	~21 months (7 qtrs)	\$15.8B valuation at \$100M ARR (May 2026)	CMS Wire / Sacra

Sources: Manus; Lovable; Sacra (Cursor); SaaStr; CMS Wire (Sierra).

OUR BENCHMARK CASE

We are not pricing this Series A on a Manus or Lovable trajectory. We are pricing it on a Sierra trajectory — ~21 months to \$100M ARR on a multi-product holding, with the option value of ANS, AntimatterAI Core, and PhysioPS providing upside optionality. The valuation we are asking for is structurally consistent with that pacing — and conservatively so, given the three-game compound.

18 / PATH TO UNICORN

Year 3 (2028) at \$5.7B–\$8B — How We Get There

YEAR	REVENUE RANGE	MULTIPLE RANGE	IMPLIED VALUATION RANGE
Y1 (2026)	\$25–45M	20–30× ARR	\$500M–\$1.35B
Y2 (2027)	\$75–130M	22–32× ARR	\$1.65B–\$4.16B
Y3 (2028)	\$175–290M	25–35× ARR	\$4.38B–\$10.15B · Unicorn threshold crossed
Y4 (2029)	\$340–520M	22–30× ARR	\$7.48B–\$15.6B
Y5 (2030)	\$550–850M	20–28× ARR	\$11B–\$23.8B

BENCHMARKED AGAINST THE COMP SET

Sierra reached \$100M ARR in 21 months ([CMS Wire](#)). Cursor reached \$100M ARR in 12 months, \$1B ARR in 17 months ([SaaStr](#)). Manus and Lovable both hit \$100M ARR in 8 months. We do not need to match those trajectories to reach the unicorn threshold by Y3 — we need to hit \$175M+ ARR by 2028 with the holding's gross margin profile intact and a category multiple of 25–35×. The comp set says that is the going price.

THE PROBABILITY-WEIGHTED CASE

Conservative scenario (40% probability): Y3 = \$175M revenue × 25× = \$4.4B (approaching unicorn, fundraising required). Base case (45% probability): Y3 = \$235M revenue × 30× = \$7.05B (unicorn crossed). Aggressive scenario (15% probability): Y3 = \$290M revenue × 35× = \$10.15B (decacorn trajectory). Expected value at Y3: ~\$6.5B.

Methodology & Sources

METHODOLOGY

Every quantitative claim in this document was validated against premium primary sources — Gartner, Morgan Stanley, McKinsey, Grand View Research, MarketsandMarkets, Precedence Research, Crunchbase, Bloomberg, TechCrunch, CNBC, Reuters, and SEC/regulatory filings. Comp set valuations were cross-checked against Sacra, Crunchbase News, and primary press releases. Where two sources gave divergent figures, the more conservative or the more recent was selected, with the source identified inline. Where a figure is presented as [INFERRED / INDUSTRY ESTIMATE], the underlying composition is described in the body text.
