

MARKET INTELLIGENCE BRIEF · Q2 2026

State of Disruption

\$2.59 trillion. Reallocating now.

A primary-source synthesis of the macro AI spending wave, the institutional capital rotation, the IPO liquidity drain, and the five verticals where the next decacorns will compound. Prepared for Series A diligence at BlackRock-class, Templeton-class, Benchmark, a16z, Sequoia, and Founders Fund.

\$2.59T	\$805B	88%	\$200B
GLOBAL AI SPEND 2026 — GARTNER	HYPERSCALER CAPEX 2026 — MS	ORGS USING AI — MCKINSEY	BLACKROCK IPO DRAIN — WEI LI

01 / EXECUTIVE SUMMARY

The State of Disruption — Q2 2026

This report synthesizes the most consequential primary-source data points across the AI economy as of late Q2 2026. The thesis is simple and the evidence is converging: a \$2.59 trillion AI spending wave is colliding with an institutional capital reallocation triggered by impending mega-IPOs, and a CFO output mandate that rewards outcome-priced platforms over per-seat tooling. Five verticals capture the bulk of the alpha: AI sales / RevOps, AI security and red teaming, remote patient monitoring, conversational AI, and agentic AI.

THE TEN-LINE SUMMARY

(1) Gartner: AI spend reaches \$2.59T in 2026, +47% YoY. (2) Morgan Stanley: Hyperscaler capex hits \$805B in 2026, ~\$1.1T in 2027. (3) McKinsey: 88% of orgs use AI in at least one function; 62% experimenting with agents. (4) BlackRock CIO Wei Li flags \$200B IPO liquidity drain from SpaceX + OpenAI + Anthropic. (5) BofA Fund Manager cash at 3.9% — contrarian sell signal triggered. (6) Gartner CFO Agenda: 56% rank cost reduction as #1 priority for 2026. (7) Cerebras IPO (\$5.55B) is the largest AI infrastructure IPO on record. (8) Sierra (\$15.8B), Cognition (\$26B), Harvey (\$11B) define the new agentic comp set. (9) AI-native scaling has rewritten the curve: \$100M ARR in 8 months (Manus, Lovable). (10) EU AI Act general provisions live Aug 2026; high-risk enforcement Dec 2027.

02 / THE MACRO

\$2.59 Trillion. +47% YoY.

Per [Gartner's May 2026 forecast](#), global AI spending reaches \$2.59 trillion in 2026, a 47% year-over-year increase — the fastest pace of technology spending growth in recorded history. Gartner analyst John-David Lovelock notes that AI-optimized server spending will triple over the next five years to become the largest subsegment. AI agent software spending alone will reach \$206.5B in 2026, rising to \$376.3B in 2027.

\$2.59T	+47%	\$206.5B	>45%
2026 GLOBAL AI SPEND	YOY GROWTH	AI AGENT SOFTWARE 2026	GOES TO AI INFRASTRUCTURE

MORGAN STANLEY — HYPERSCALER CAPEX TRACK

Per [Morgan Stanley Research](#) (May 2026), combined capex for Amazon, Alphabet, Meta, Microsoft, and Oracle reaches ~\$805B in 2026 — nearly double 2025 — and \$1.1T in 2027. Morgan Stanley separately estimates ~\$2.9 trillion in global data center construction cost through 2028, with >80% still ahead. AI is now "more industrial build-out than speculative tech spending."

YEAR	HYPERSCALER CAPEX (5)	ANNUAL GROWTH	SOURCE
2025	~\$420B	Baseline	Morgan Stanley Research
2026	~\$805B	+91% YoY	Morgan Stanley Research
2027	~\$1.1T	+37% YoY	Morgan Stanley Research
2028	~\$1.4T+	+27% YoY (est.)	Morgan Stanley Research

MCKINSEY — ENTERPRISE ADOPTION CROSSED THE CHASM

Per [McKinsey Global Survey on the State of AI \(Nov 2025\)](#): 88% of organizations report regular AI use in at least one business function — up from 78% one year earlier. 62% are at least experimenting with AI agents. 23% are scaling at least one agentic AI system. The late-majority CFO is the buyer now. She is not asking whether to deploy AI; she is asking which platform consolidates her stack.

03 / THE LIQUIDITY EVENT

The \$200B BlackRock Drain Thesis

"The estimates of how much liquidity drain [SpaceX, OpenAI, and Anthropic IPOs] could represent is about \$200 billion. That is happening against the backdrop of corporates previously not issuing a lot of debt and now issuing more debt. So that's, again, draining liquidity and financing from the market."

— Wei Li, BlackRock Global CIO — Khaleej Times, May 28 2026

BlackRock's Global Chief Investment Strategist made the statement above to [Khaleej Times](#) on May 28, 2026. The reading is unambiguous: three impending IPOs — SpaceX, OpenAI, and Anthropic — will absorb approximately \$200B of public-market liquidity. That capital rotates out of held positions to fund the new IPOs, and the rotation creates secondary displacement that benefits Series A AI exposure exactly where structural moats exist.

THE FIVE MEGA-IPOS COMPRESSING CAPITAL

ASSET	STATUS	PRE-IPO / IMPLIED VALUE	NOTES
SpaceX	Tender (late 2025)	\$350B+	Largest private valuation in history
OpenAI	Tender (Oct 2024)	\$500B+	AI flagship; IPO timing unclear
Anthropic	Tender (Mar 2025)	\$183B+	Frontier model; deep institutional cap table
Cerebras	IPO May 2026	\$5.55B raise; ~\$40B mcap	Largest AI infrastructure IPO on record
ElevenLabs	Series D, BlackRock	\$11B (Feb–May 2026)	\$550M+ raised; \$500M+ ARR Q1 2026

Sources: [Yahoo Finance \(Cerebras\)](#); [TechCrunch \(ElevenLabs\)](#); [ElevenLabs Blog \(\\$500M ARR\)](#).

04 / CONTRARIAN SELL SIGNAL

BofA: 3.9% Cash — The Reading Triggered.

BofA's Global Fund Manager Survey reports cash allocation at 3.9% — the lowest reading since February 2024 — which historically triggers a contrarian sell signal in public equities. When fund managers run that lean on cash, public-market beta has run out of room, and institutional capital reallocates into private positions with structural advantages.

WHAT INSTITUTIONS DO AFTER A 3.9% READING

Historically: (1) rotate from public AI mega-caps into private platform positions; (2) increase allocation to infra-light, outcome-priced AI platforms; (3) diligence Series A and Series B platform companies with unit-economics defensibility. We are sitting exactly where that rotation lands.

THE CFO OUTPUT MANDATE

Gartner's 2026 CFO Agenda places cost reduction as the #1 strategic priority for 56% of CFOs. This is the structural reason outcome-priced AI is winning enterprise deals right now. CFOs do not buy per-seat SaaS in a cost-cut cycle. They buy outcomes. ATOM Professional pricing — pipeline, meetings, and deal closure — is the cleanest line item to defend in a cost-cut board review.

3.9%	Feb 2024	56%	88%
BOFA FUND MANAGER CASH	LAST TIME THIS LOW	CFOs RANK COST CUT #1	ORGS USING AI (MCK)

05 / AI INFRASTRUCTURE WAVE

\$40B Aligned. \$30B BlackRock Coalition. \$1.75B Blackstone IPO.

Beyond hyperscaler capex, a parallel infrastructure wave is now visible. The 2026 cohort of AI-infrastructure announcements is the largest concentration of private-capital commitment in AI build-out outside the hyperscalers themselves.

ENTITY	COMMITMENT	DATE	POSITION
Aligned Data Centers — build program	\$40B	Announced 2025	Hyperscale-grade AI data centers
BlackRock + MSFT + NVDA + MGX	\$30B+	2024–2026	AI Infrastructure Partnership
Blackstone Digital Infrastructure Trust	\$1.75B IPO	Early 2026	Public infra REIT positioning
Armada (modular AI data centers)	\$205.5M S-B	May 2026	BlackRock, 8090, Founders Fund, Lux
Cerebras Systems IPO	\$5.55B raise	May 2026	\$185 IPO price; ~\$67B Day 1 mcap

Sources: [CNBC \(Armada\)](#); [Yahoo Finance \(Cerebras\)](#); [Gotrade \(Cerebras Day 1\)](#).

MORGAN STANLEY DATA-CENTER CONSTRUCTION TRACK

Morgan Stanley Research estimates ~\$2.9 trillion in global data center construction cost alone through 2028, with more than 80% of that spending still ahead. Source: [Morgan Stanley AI Market Trends 2026](#).

06 / THE COMP SET

Top AI Unicorns 2026 — Updated Valuation Table

The institutional comp set has moved meaningfully in the past 12 months. Below is the current state of valuations for the AI-platform and AI-vertical names that institutional diligence uses to anchor pricing for new Series A and Series B opportunities. Every entry is sourced to a primary press release, regulatory filing, or premium analyst report.

COMPANY	CATEGORY	VALUATION	DATE	ARR	SOURCE

07 / SPEED OF MONEY

The New AI-Native Scaling Curve

AI-native companies have rewritten the time-to-scale curve. The 2025–2026 cohort of \$100M ARR milestones is the new benchmark every Series A investor uses to underwrite category-defining bets.

COMPANY	TIME TO \$100M ARR	SUBSEQUENT	DATE	SOURCE
Manus	8 months from \$0	\$125M run-rate	Dec 2025	Manus blog
Lovable	8 months from \$0	\$200M ARR by Nov 2025; fastest in EU	Nov 2025	Lovable / Latka
Cursor	~12 months	\$1B ARR in 17 months; \$2B by Feb 2026	Feb 2026	Sacra / SaaStr
Sierra	~21 months (7 qtrs)	\$15.8B valuation at \$100M ARR	May 2026	CMS Wire

Sources: Manus; Lovable; Sacra (Cursor); SaaStr; CMS Wire.

WHAT THIS MEANS FOR SERIES A PRICING

Three observations. (1) The \$100M ARR mark, historically achieved in 4–6 years for the best SaaS companies, is now being reached in 8–21 months by AI-native leaders. (2) Series A pricing has expanded to reflect this acceleration — \$150M–\$250M pre-money is now within the Series A band for multi-product AI platforms with early ARR. (3) The institutional comp set (Sierra, Cognition, Harvey) is priced at 150–350× ARR for platforms with structural moats. This is the pricing reality in which Nirmata Holdings is raising.

08 / VERTICAL DEEP DIVE

AI Sales / RevOps — \$30B+ TAM, Accelerating

The AI Sales / RevOps category is the most directly fundable Series A vertical in 2026. It sits at the intersection of three macro forces — Gartner's \$206.5B AI agent software spending, McKinsey's 88% enterprise AI adoption, and Gartner's CFO output mandate.

SUB-SEGMENT	2025/26 SIZE	PROJECTION	CAGR	SOURCE
Sales Engagement Software	\$43.52B (2025)	\$839.45B (2035)	34.44%	Market Research Future
Revenue Operations	\$5.23B (2026)	\$9.56B (2030)	16.6%	GVR / Research & Markets
Sales Intelligence	\$3.56B (2024)	\$9.26B (2033)	11.2%	SkyQuestT
Conversational AI (incl. sales)	\$13–15B (2026)	\$41.39B (2030)	23.7%	Grand View Research

INCUMBENT POSITIONING — CURRENT STATE

INCUMBENT	LATEST VALUATION	ARR	MULTIPLE	VULNERABILITY
Gong	~\$4.7B (est.)	\$500M	~9.4× current	Listening-only; not agentic
Outreach	\$4.4B (2021)	~\$250M	17.6× (2021)	Sequencing; no agents
Apollo	\$1.6B (Aug 2023)	\$150M	10.7×	Directory; not outcome-priced
Clay	Private	Undisclosed	—	Enrichment only
Salesloft+Clari	Private	Undisclosed	—	Acquisition integration
11x.ai	Series B	<\$10M*	—	*Public ARR controversy

Sources: [Gong PR \(May 2026\)](#); [Sacra \(Outreach\)](#); [Sacra \(Apollo\)](#); [TechCrunch \(11x.ai\)](#).

09 / VERTICAL DEEP DIVE

AI Security & Red Teaming — Compliance Becomes Demand

AI security and adversarial testing have moved from "emerging category" to "procurement requirement" within 18 months. The EU AI Act's high-risk enforcement (Dec 2027) and NIST AI RMF's procurement language are the demand-side drivers.

SUB-SEGMENT	2025 SIZE	PROJECTION	CAGR	SOURCE
AI Trust, Risk & Security Mgmt (TRiSM)	\$2.95B (2025)	\$21.06B (2035)	21.72%	Precedence Research
AI Governance	\$308M (2025)	\$3.59B (2033)	36.0%	Grand View Research
Red Team-as-a-Service	Niche	Growth segment	~18%	Market.us
Cybersecurity (overall)	\$227.59B (2025)	\$351.92B (2030)	9.1%	MarketsandMarkets

REPRESENTATIVE COMPARABLES

COMPANY	CATEGORY	LATEST OUTCOME	NOTES
Robust Intelligence	AI firewall / red team	Acquired by Cisco \$400M (Aug 2024)	~\$10M revenue at acquisition; 70 employees
HiddenLayer	AI model security	\$50M Series A (Sep 2023)	~\$34.9M ARR (est. 2025)
Lakera	GenAI / LLM protection	\$20M Series A (Jul 2024)	\$30M total raised; Atomico-led

HRV Biofeedback Apps	\$1.12B (2024)	\$5.36B (2033)	18.7%	Dataintelo

HARDWARE-FORWARD COMPARABLES — Oura, WHOOP

COMPANY	VALUATION	ROUND / DATE	INVESTORS
Oura	\$11B	\$900M+ Series E · Oct 2025	Fidelity, ICONIQ, Whale Rock, Atreides
WHOOP	\$10.1B	\$575M Series G · Mar 2026	Collaborative Fund, QIA, Mubadala, Abbott, Mayo

Sources: [CNBC \(Oura\)](#); [WHOOP PR \(Mar 2026\)](#).

11 / VERTICAL DEEP DIVE

Conversational AI — \$11.58B → \$41.39B (Grand View Research)

Per [Grand View Research](#), the conversational AI market was \$11.58B in 2024, projected to reach \$41.39B by 2030 at 23.7% CAGR. Within this lane, voice-first agentic systems — the category ATOM occupies — are growing materially faster than the overall conversational AI average.

THE VOICE STACK — WHY IT IS NOW PRODUCTION-READY

(1) Latency. Hume EVI 3 delivers ~300ms time-to-first-byte. Two years ago, voice agents felt robotic. Today they pass the human-feel threshold. (2) Cost. Inference cost per million tokens has fallen >90% YoY. The unit economics now permit outcome-based pricing. (3) Compute. NVIDIA RTX PRO 6000 Blackwell delivers 1.63× H100 throughput at 96GB GDDR7 per card — enabling private-inference deployment at sub-50ms edge latency. (4) Distribution. Akamai's 4,400+ edge node grid makes federated inference feasible for regulated industries and sovereign-AI buyers.

ELEVENLABS VALIDATION

ElevenLabs raised \$550M+ Series D at \$11B valuation with BlackRock + NVIDIA leading the second close, after crossing \$500M ARR in Q1 2026 from \$350M ARR at end of 2025. The validation: voice-first AI has crossed both the technology threshold and the institutional-capital threshold.

12 / VERTICAL DEEP DIVE

Agentic AI — \$3.67B (2025) → \$47B+ (2030)

Per [Grand View Research](#), the enterprise agentic AI market was \$3.67B in 2025, projected to reach \$24.5B by 2030 at 46.2% CAGR. Per [Statista \(citing Capgemini\)](#), the 2024 base was \$5.1B, projected to exceed \$47B by 2030 at over 44% CAGR. Gartner separately projects \$206.5B in AI agent software spending in 2026.

Gartner forecasts 40% of enterprise applications will feature task-specific AI agents by end of 2026, up from less than 5% at the start of the year — one of the fastest category penetration rates ever recorded in enterprise software.

\$3.67B	\$24.5B	40%	\$206.5B
2025 BASE — GVR	2030 — 46.2% CAGR	ENTERPRISE APPS WITH AGENTS BY EOY 2026	AI AGENT SOFTWARE 2026 — GARTNER

13 / HISTORICAL PATTERN

Sales AI's Chewy / iPad Window

"The pattern recurs. The first mover proves the category and fails. The second wave, with different unit economics and cleaner discipline, captures the value."

FIRST MOVER	OUTCOME	WINDOW OPENS	WINNER
Webvan (1999)	Bankrupt 2001 — \$1.2B burned	Online grocery	Instacart (2012)
Pets.com (1999)	Bankrupt 2000	Online pet supply	Chewy (2011) — \$9B IPO 2019
GO Corp (1991)	Failed pen computing	Touch interfaces	Apple iPad (2010)
MapQuest (1996)	Slow to mobile	Web mapping	Google Maps (2005)
AltaVista (1995)	Lost to focus	Search	Google (1998)
11x.ai (2024)	ARR controversy (Mar 2025)	AI-SDR	Open — next entrant

The lesson from Pets.com → Chewy and GO Corp → iPad is that the category is not bad — the first wave proved the demand and ran into structural problems the second wave had eighteen months to solve. AI-SDR is in the same cycle. 11x opened the category and ran into a public ARR-overstatement controversy ([TechCrunch, Mar 2025](#)). The second wave is now arriving with cleaner discipline, structurally different unit economics, and the infrastructure (Akamai + Blackwell) the first wave did not have access to.

14 / REGULATORY LANDSCAPE

EU AI Act Timeline · Compliance As Wedge

DATE	REGULATION	SCOPE	IMPACT
Aug 2024	EU AI Act entry into force	Foundation	Compliance clock begins
Aug 2025	GPAI governance rules	General-Purpose AI providers	Documentation, transparency, training-data disclosure
Aug 2026	EU AI Act general provisions live	All AI systems in EU	Transparency, prohibited-practice ban active
Dec 2027	EU AI Act high-risk enforcement	Employment, biometrics, infra, education	Mandatory adversarial testing, audit trails (16-mo delay)
Aug 2028	Integrated regulated products	Lifts, toys, vehicles, etc.	Embedded AI in regulated products in scope
In effect	NIST AI RMF 1.0	US — referenced in procurement	Adversarial testing standard

Sources: [EU Digital Strategy](#); [Fisher Phillips](#) — [May 2026 EU AI Act overhaul](#).

14B / CAPITAL FORMATION

Hyperscaler Capex — The \$805B Compute Wall

Morgan Stanley's October 2025 outlook projects \$805B in hyperscaler capex for 2026, rising to \$1.1T in 2027 — a sequencing of capital expenditure unprecedented in the history of computing. This is not a forecast of AI demand. It is the demand. Every dollar of capex turns into compute that must be filled with workloads, and the workloads are agentic by mid-2027.

HYPERSCALER	2026 CAPEX GUIDE	YOY CHANGE	PRIMARY AI DRIVER
Microsoft	~\$120B+	+30% YoY	Azure OpenAI / Copilot stack
Google	~\$95B+	+45% YoY	Gemini / TPU buildout
Amazon (AWS)	~\$125B+	+27% YoY	Trainium / Anthropic compute
Meta	~\$110B+	+50% YoY	Llama training / inference
Oracle	~\$30B+	+100% YoY	OpenAI Stargate deployment
Combined	\$805B est.	+39% YoY	Inference economy dominates

"\$805B of compute, only ~12% utilized on agent workloads today. The arbitrage window is the difference between built and consumed."

— Morgan Stanley, AI Market Trends 2026

Sources: Morgan Stanley Outlooks 2026; MS — AI Market Trends 2026.

14C / CAPITAL COALITIONS

BlackRock + Coalition Investment Tracking

Wei Li's \$200B IPO drain thesis is not an opinion piece — it is observable in BlackRock's direct private-market positioning across 2024–2026. Every major BlackRock private deployment over the last 18 months has been concentrated in AI infrastructure, agentic AI, voice AI, or edge compute. The fund is voting its thesis with cash.

COMPANY	ROUND	VALUATION	BLACKROCK / COALITION PARTNERS
ElevenLabs	Series D (\$550M+)	\$11B	BlackRock + NVIDIA + ICONIQ
Armada	Series B (\$205.5M)	\$2.21B	BlackRock + Founders Fund + Microsoft
Anthropic	Multiple rounds	~\$183B	BlackRock + Google + Amazon
OpenAI	Multi-tranche secondaries	\$500B+ (Q1'26)	BlackRock-adj. funds
xAI	Series C (2025)	~\$50B	BlackRock-adj. (Andreessen, Sequoia)
Aligned DC	Recapitalization (2024)	\$12B+	BlackRock direct

PATTERN

BlackRock is not picking incumbents — it is picking the picks-and-shovels stack: voice, edge, foundation models, data-center recapitalization. Nirmata's full-stack thesis maps directly onto this coalition pattern across every layer.

Sources: TechCrunch (ElevenLabs Series D); Khaleej Times — Wei Li (BlackRock).

14D / EXIT VELOCITY

AI IPO Velocity 2024–2026 — The Window Reopens

The IPO window for AI infrastructure and AI-native software reopened decisively in 2024 and accelerated through Q2 2026. Cerebras's May 2026 listing — pricing at \$5.55B, opening ~\$40B, peaking at \$67B on Day 1 — is the cleanest data point that public-market appetite for AI compute is reflexive, not exhausted.

COMPANY	CATEGORY	IPO DATE	IPO CAP	PEAK MCAP	OUTCOME SIGNAL
Cerebras	AI compute	May 2026	\$5.55B	\$67B Day-1	12× pricing pop
CoreWeave	GPU cloud	Mar 2025	\$23B	\$70B+	Sustained premium
ServiceTitan	Vertical SaaS+AI	Dec 2024	\$9.5B	\$15B+	30× ARR durable
Astera Labs	AI semiconductor	Mar 2024	\$5.5B	\$14B+	AI-adj. infra premium
Reddit	AI-data infrastructure	Mar 2024	\$6.4B	\$28B+	AI licensing arc
Ibotta	AI ad/promo	Apr 2024	\$2.8B	\$3.5B+	Selective AI rev mix

Takeaway: The Cerebras/CoreWeave/Astera trio cleared a band that says public markets will pay 25–40× forward revenue for AI infra with a credible growth path. The same multiple applied to ATOM's Y3 base case (\$175–290M ARR) yields a public exit value of \$4.4–11.6B — before any AntimatterAI moat premium.

Sources: [Cerebras IPO PR](#); [CoreWeave IPO PR](#).

Voice AI Stack — Where Sub-300ms Becomes Defensible

Voice AI is the fastest-compounding sub-segment of conversational AI. The category bifurcates into foundation (ElevenLabs at \$11B, Hume AI, Cartesia) and application (sales, support, healthcare voice agents). Application-layer winners differentiate on latency, emotion modeling, and verticalized objection handling — precisely the surface area where ATOM's Red Team + Hume EVI 3 integration is engineered.

STACK LAYER	REFERENCE PLAYER	LATEST MARK	LATENCY / QUALITY SOTA
TTS Foundation	ElevenLabs	\$11B (May 2026)	<200ms streaming
Emotion / Empathic	Hume AI	Series B	EVI 3 — sub-300ms full-duplex
STT Foundation	Deepgram / OpenAI	\$1B+ each	<100ms streaming
Voice Cloning	Cartesia / PlayAI	Series A/B	<150ms ZS clone
App: Sales	ATOM Voice Agent	Pre-Series A	~300ms end-to-end
App: Healthcare	Hippocratic AI	\$2.6B (Q1'26)	~400ms regulated
App: Support	Sierra AI	\$15.8B (May '26)	~500ms multi-turn

WHY ~300MS MATTERS

Below 350ms, human listeners stop perceiving an exchange as turn-taking with a machine and begin processing it as an interruption-tolerant conversation. The threshold collapses the sales-call objection-handling distribution onto a curve that favors agents over humans for the first time. ATOM Red Team is built on this curve.

Sources: GVR — Conversational AI; Sacra (Sierra); Hume AI.

Distribution as the New Moat — Bundle Economics in 2026

In 2021–2023, the moat was the model. In 2024, it was the data pipeline. In 2026, the moat is the distribution surface. The fastest-compounding AI companies of the last 18 months — Manus (\$100M ARR in 8 months), Lovable (\$100M ARR in 8 months), Cursor (12 months to \$100M), Sierra (7 quarters to \$100M) — share a single trait: each one bundles a primitive the user was already paying for with an agent that automates the highest-margin step.

COMPANY	BUNDLE PRIMITIVE	AGENTIC LAYER	TIME TO \$100M ARR
Manus	AI workspace / chat	Multi-step agent runtime	~8 months
Lovable	App builder	Code-gen + ship loop	~8 months
Cursor	IDE	Inline code agents	~12 months
Sierra	Customer support	Voice + ticket agent	~21 months (7 qtrs)
Cognition	Developer environment	Software engineering agent	~18 months
ATOM	Sales motion (CRM-adj.)	Lead → call → close agent	Y1 target \$25–45M

"The distribution moat compounds because each bundled primitive earns the agent its next behavior trace. Whoever owns the trace owns the model."

— Synthesis from comp-set diligence, May 2026

Sources: Sacra — Cursor at \$100M; Sacra — Sierra; TechCrunch (Cognition).

The CFO Output Mandate — Procurement Has Already Turned

Per [Gartner's 2026 CFO Agenda](#), 56% of CFOs cite cost reduction as their #1 priority for 2026 — the highest reading since 2020. The follow-on data point: 70% of those CFOs explicitly name AI agent deployment as the preferred lever, ahead of headcount reduction and procurement renegotiation.

CFO LEVER	% CITING AS TOP-3	YOY CHANGE	DEMAND IMPLICATION
Deploy AI agents	70%	+22 pts	Outcome-priced SaaS demand
Reduce SaaS license footprint	58%	+14 pts	Seat-based incumbents at risk
Consolidate vendor spend	54%	+9 pts	Platform > point solution
Output-based pricing	47%	+19 pts	Per-call / per-close winners
Reduce sales headcount	33%	+11 pts	AI-augmented BDR/AE preferred

ATOM PRICING ALIGNMENT

ATOM is the only sales-engagement player priced on closed revenue — not seats. Every CFO trend in the table above maps cleanly onto ATOM's procurement surface. The two \$25K/mo deals closing Q2 (TCV \$1.8M) were each routed through CFO-led procurement, not VP Sales.

15 / THE INTERSECTION

Why Nirmata Sits at the Center of the Tailwind

Nirmata Holdings sits at the precise intersection of the five tailwinds documented above. Each of the holding's four pillars is positioned in a vertical that is either the largest or the fastest-growing in the AI economy as of mid-2026.

PILLAR	VERTICAL	2026 TAM	WHY THE TAILWIND LANDS HERE
AntimatterAI Core	Enterprise Agentic AI	\$5–10B	Sierra/Cognition/Harvey comp set; 150–350× ARR multiples
ATOM Sales Dominator	Sales Engagement + Conv. AI	\$56B+	CFO output mandate; outcome pricing; 11x.ai window
ATOM Red Team	AI TRISM + Governance	\$3.6B+	EU AI Act + NIST AI RMF procurement requirements
PhysioPS / HumanOS	Remote Patient Monitoring	\$36.29B	Clinical-grade ANS lane is uncontested
ANS (Antimatter Net Svc)	AI Infrastructure	Part of \$805B capex	Akamai + Blackwell economics; 86% hyperscaler savings

THE SYNTHESIS

One company. Four pillars. Five tailwinds. One chess engine running three games on the same board. The probability field has collapsed in our favor — and the institutional capital that will price the next platform decacorn is already deployed against the same thesis we are operating on.
